Significant Occurrence in Even Musical Texture in Bach's Preludes

A Study Using Mathematical Tools

Dalia Cohen **Idith Segev**

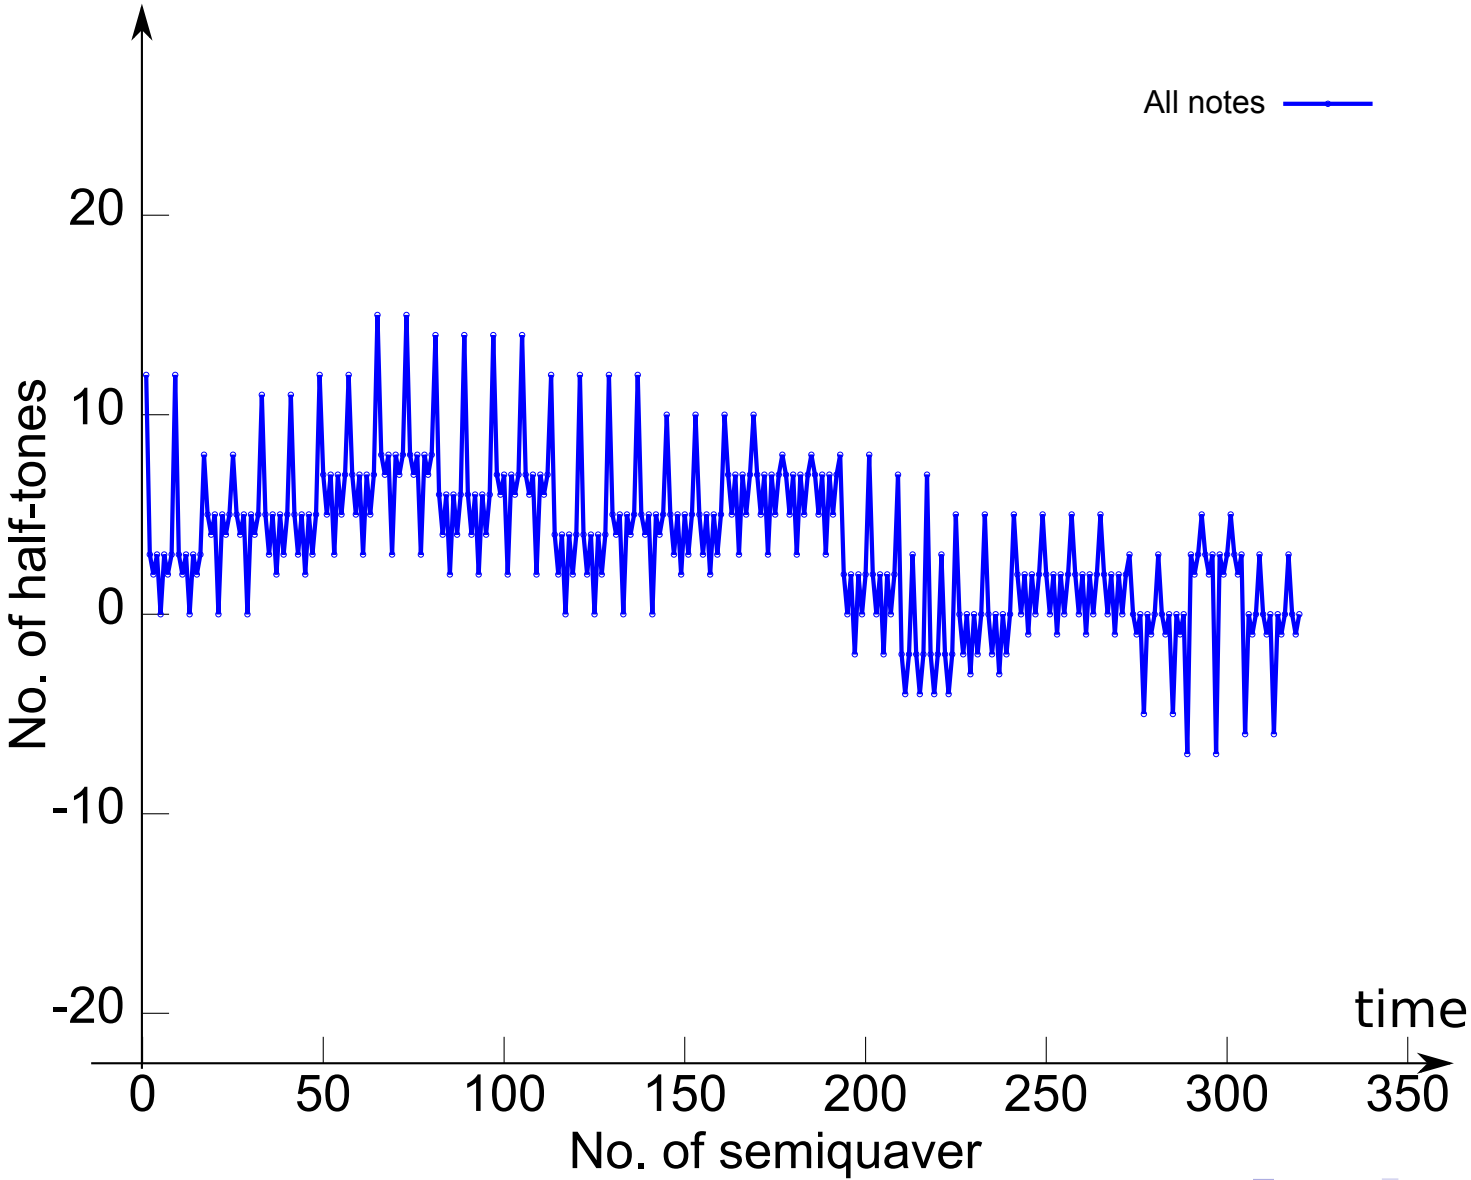
14th Biennial Baroque Conference
July 1, 2010

Curve of all notes of Do minor



Basic Definitions

1. **"Learned" schemata**
   - Collection of notes
   - Intervals
   - Harmonies
   - Tonal organization

Basic Definitions

1. **"Learned" schemata**
   - Collection of notes
   - Intervals
   - Harmonies
   - Tonal organization
2. **"Natural" schemata**
   - Range of occurrence related to normative range
   - Types of curves of change (in our study - only of **pitch**)
   - Cognitive **operations**: augmentation/diminishing, contrast, shift, splitting and gathering, equivalence
   - Concurrence and non-concurrence, rarity

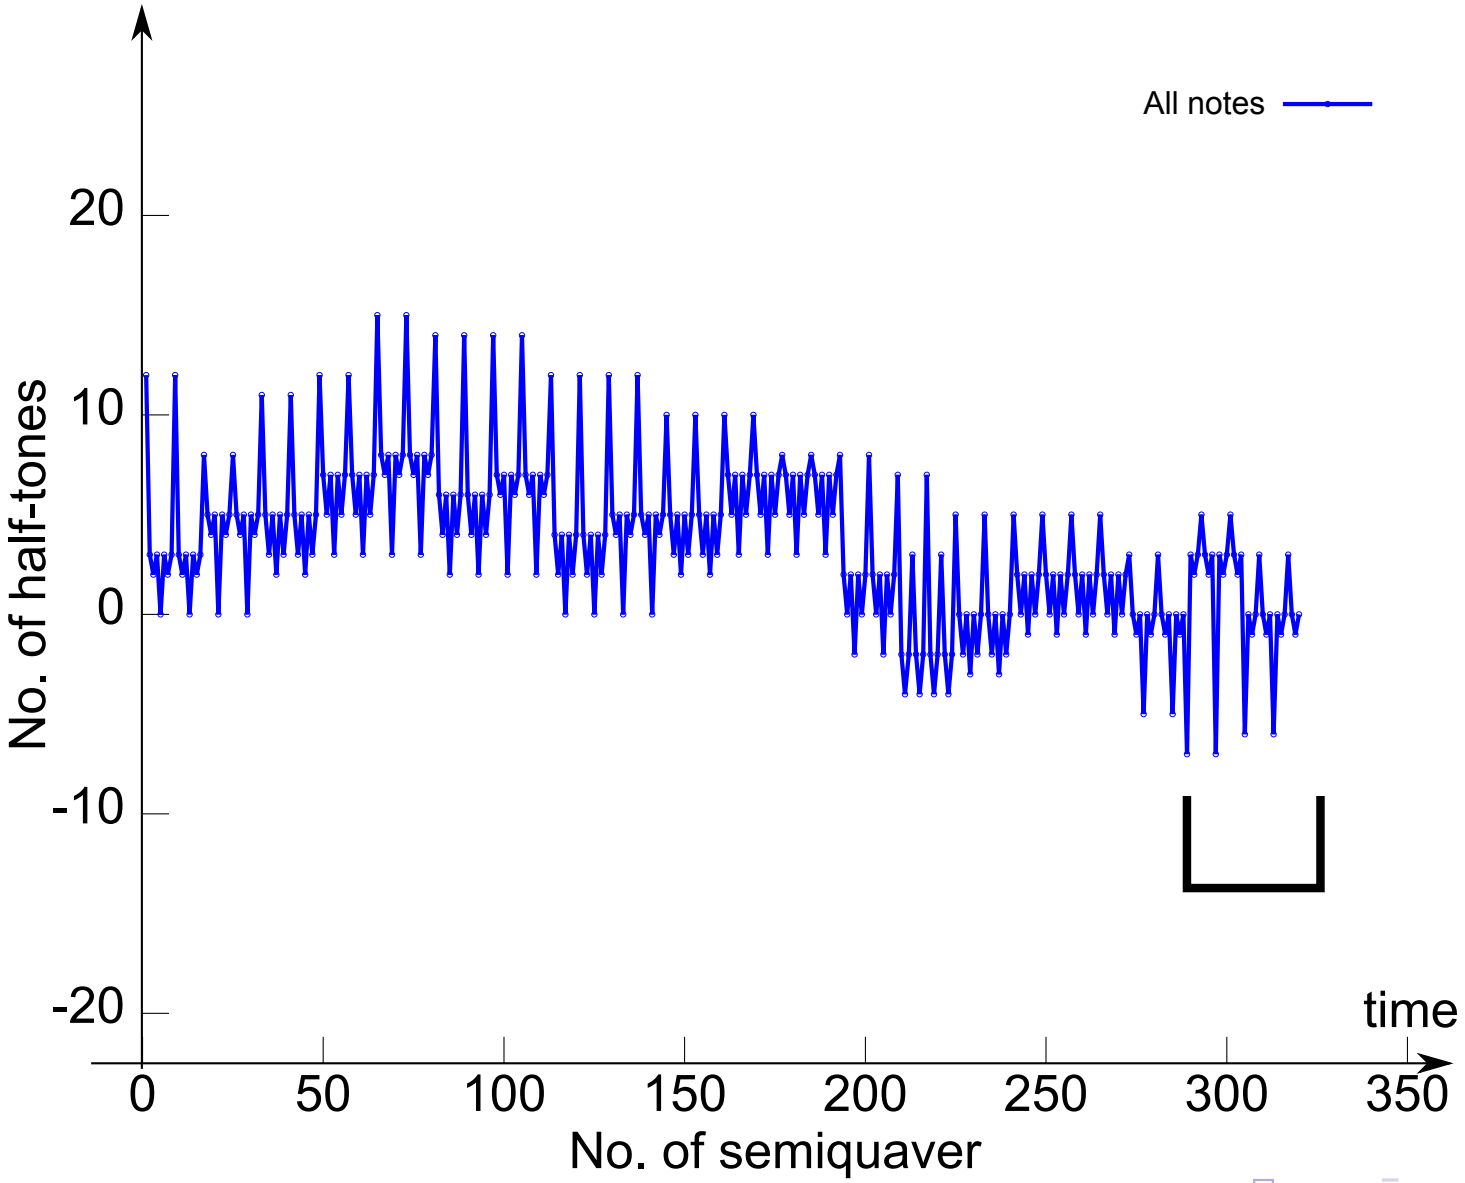
Definitions

1. The '**New Variable**'
   - includes small, hidden, meaningful deviations of all the natural schemata
   - relates strongly to the tonal harmony

Definitions

1. The '**New Variable**'
   - includes small, hidden, meaningful deviations of all the natural schemata
   - relates strongly to the tonal harmony
2. "**Evenness**" - a constant parameter or characteristic
   - Duration
   - Pitch curve of the **pattern** (up to small deviations)

Curve of all notes of Do minor



First stage

Selecting Preludes from the **WTC-I by Bach**
with common characteristics

- **'even' duration**

First stage

Selecting Preludes from the **WTC-I by Bach**
with common characteristics

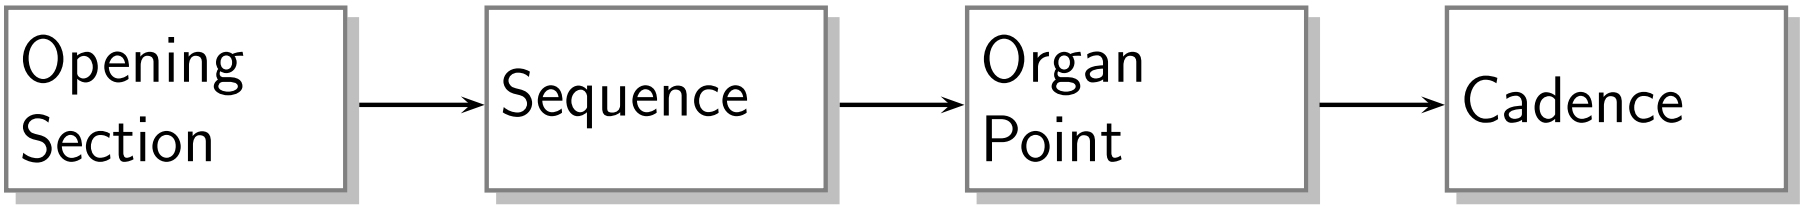
- **'even' duration**
- **'even' curves of pitch - patterns**, up to small deviations

First stage

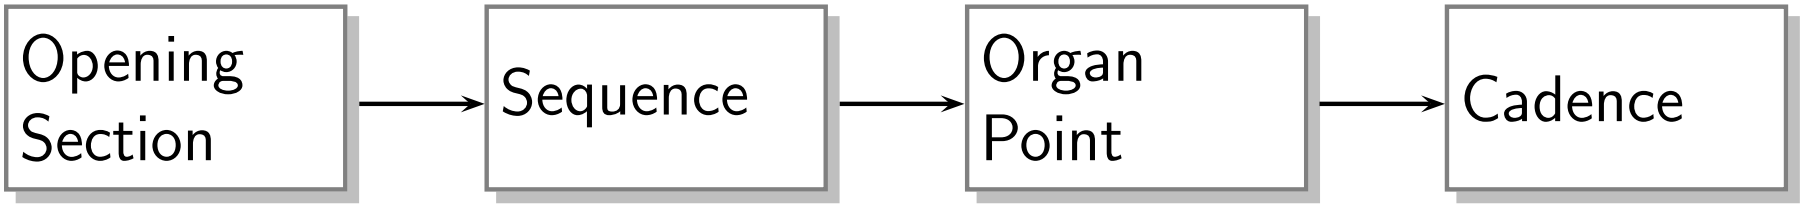
Selecting Preludes from the **WTC-I by Bach**
with common characteristics

- **'even' duration**
- **'even' curves of pitch - patterns**, up to small deviations
- **similar structure**

The Generic Model of an Even Prelude by Bach

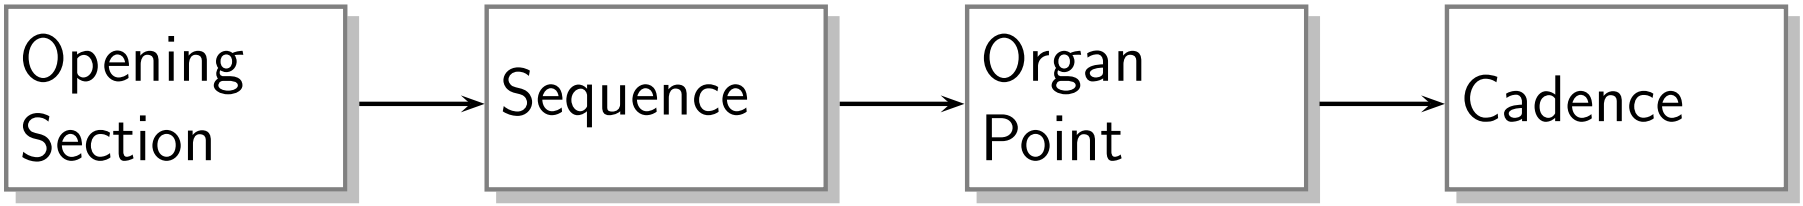


The Generic Model of an Even Prelude by Bach



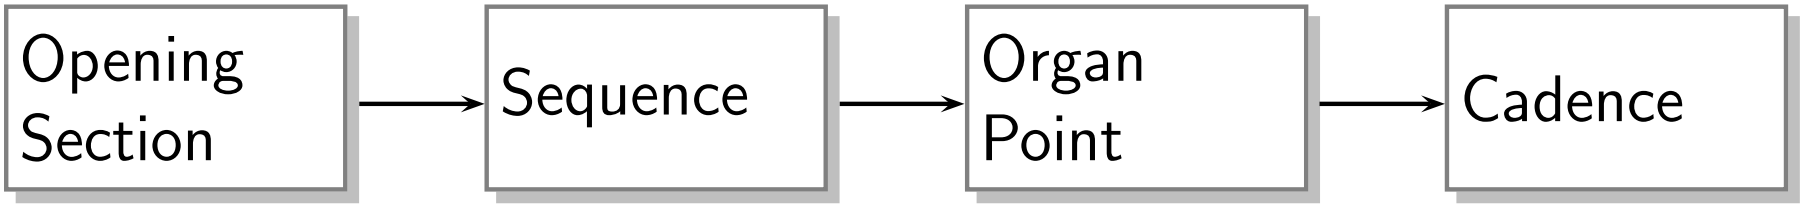
1. I,II,V,I; or I, IV, VII, I;

The Generic Model of an Even Prelude by Bach



1. I,II,V,I; or I, IV, VII, I;
2. Bach is using one of his famous **Figured Bass Formulas** e.g. (second, sext), 2,6,2,6,...

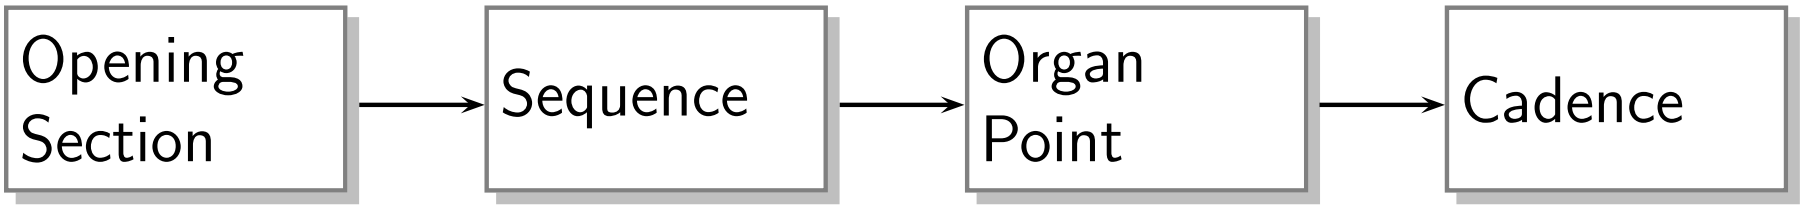
The Generic Model of an Even Prelude by Bach



1. I,II,V,I; or I, IV, VII, I;
2. Bach is using one of his famous **Figured Bass Formulas** e.g. (second, sext), 2,6,2,6,...

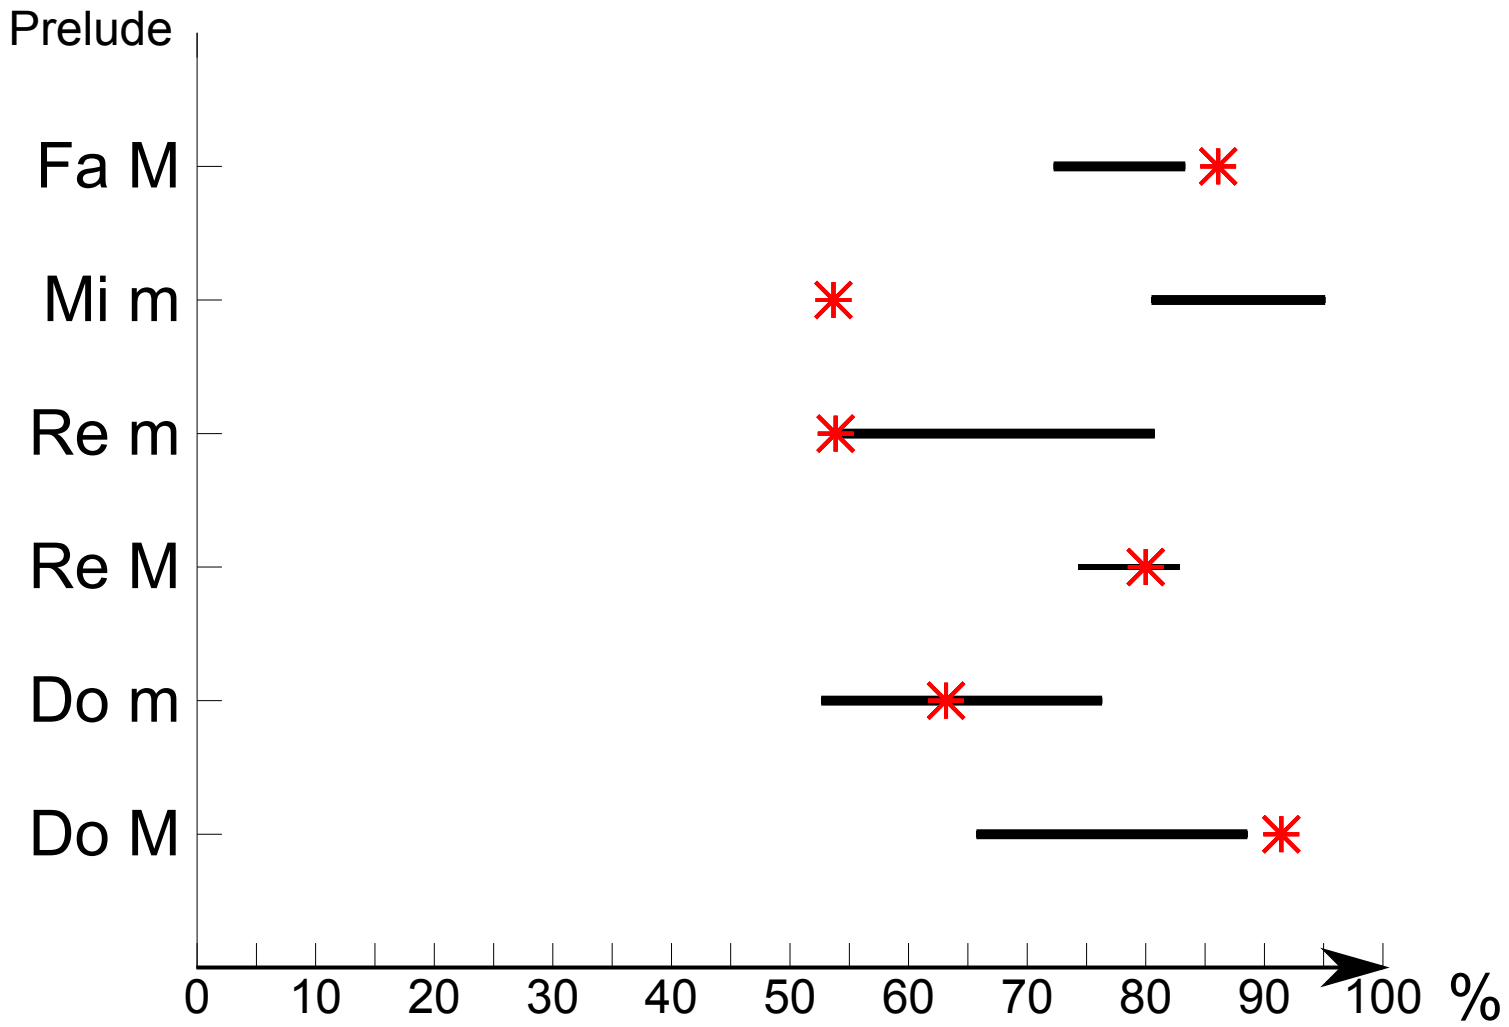
4. The Cadence - '**Bach the Believer**'

The Generic Model of an Even Prelude by Bach



1. I,II,V,I; or I, IV, VII, I;
2. Bach is using one of his famous **Figured Bass Formulas** e.g. (second, sext), 2,6,2,6,...
3. The Organ Point - appears usually in the second half of the prelude
4. The Cadence - '**Bach the Believer**'

The Location of the Organ points



Basic Musical Units

1. Nuclei

Basic Musical Units

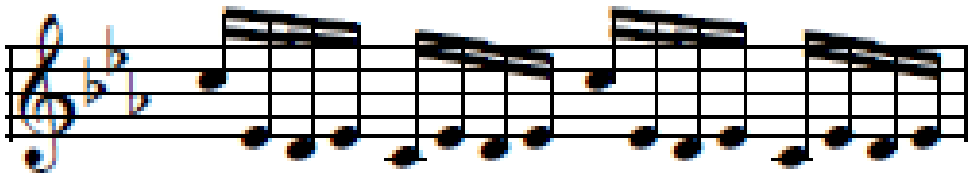
1. Nuclei
2. Patterns

Basic Musical Units

1. Nuclei
2. Patterns
3. Groups of patterns (higher levels)

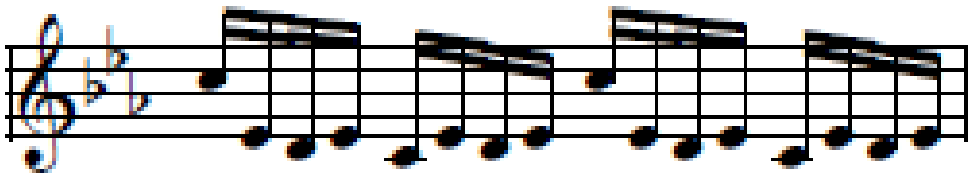
Convex and Concave curves of Nuclei and Patterns

1. First pattern (repeated), of Do minor prelude (no. 2)

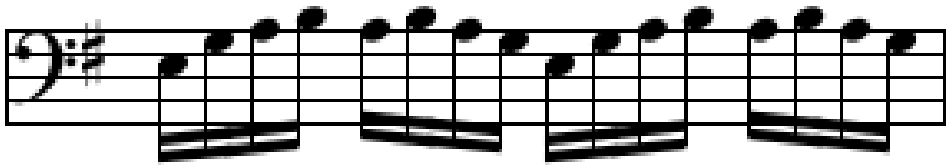


Convex and Concave curves of Nuclei and Patterns

1. First pattern (repeated), of Do minor prelude (no. 2)

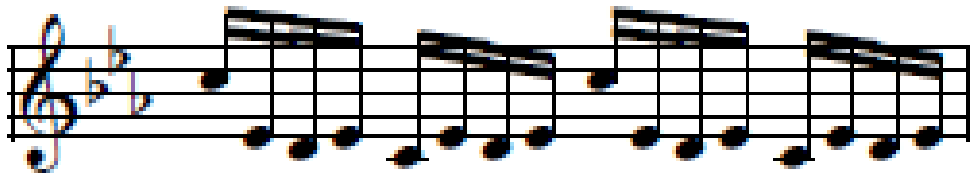


2. First pattern (repeated), of Mi minor prelude (no. 10)

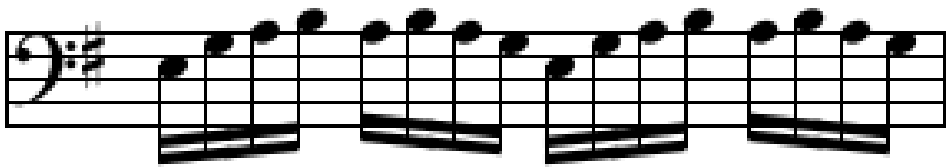


Convex and Concave curves of Nuclei and Patterns

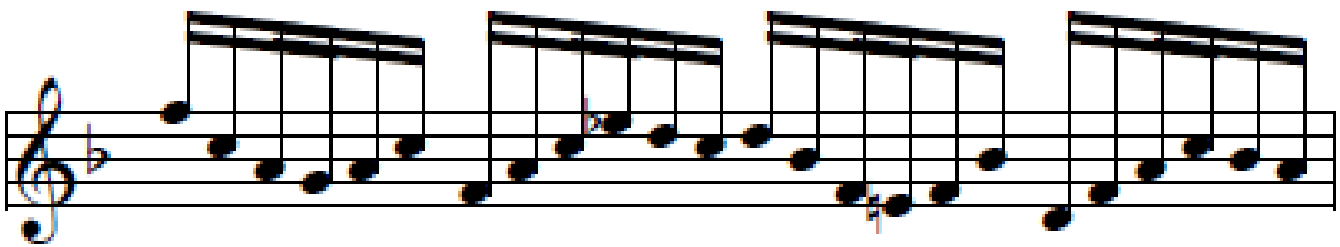
1. First pattern (repeated), of Do minor prelude (no. 2)



2. First pattern (repeated), of Mi minor prelude (no. 10)

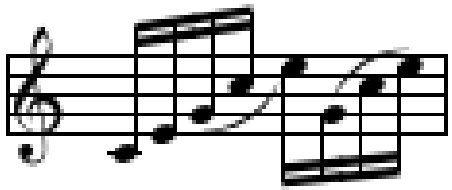


3. First and second patterns of Fa M prelude (no. 11)



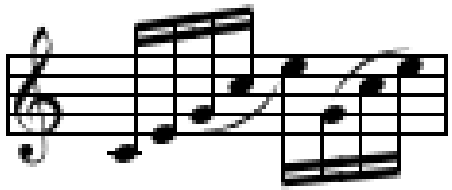
Straight-Lines Curves in Different Directions

1. First pattern of Do M prelude (no. 1)

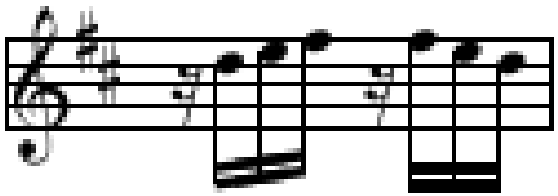


Straight-Lines Curves in Different Directions

1. First pattern of Do M prelude (no. 1)

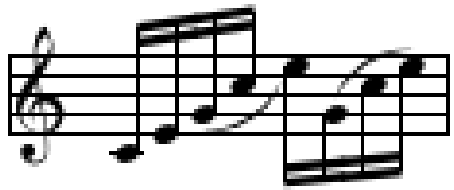


2. First pattern of Re M prelude (no. 5)

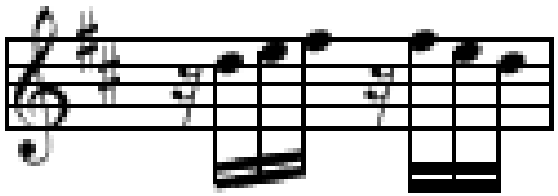


Straight-Lines Curves in Different Directions

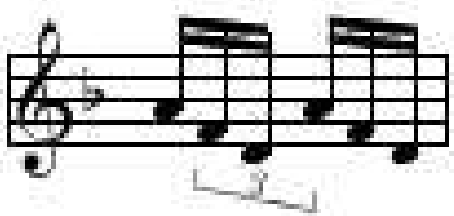
1. First pattern of Do M prelude (no. 1)



2. First pattern of Re M prelude (no. 5)



3. First pattern of Re minor prelude (no. 6)

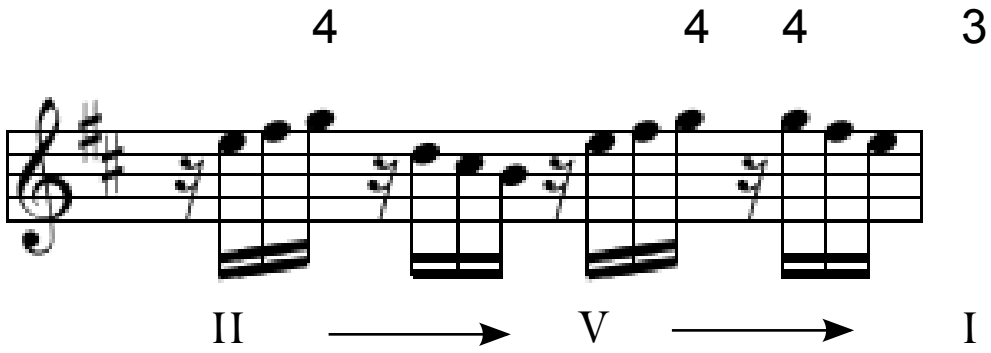


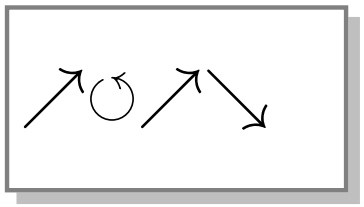
Basic Graphical Presentation of Nuclei

WTC-I Prelude	→ All Nuclei Directions	→ Basic Direc.	→ 1st Nucleus	→ 2nd Nucleus
Do M		↗↗	↑△	↑△
Do m		↘↗	↓≒, ∨	↑≒, ∨
Re M		↗↘	↑≮, ≒	↓≮, ≒
Re m		↘↘	↓△	↓△
Mi m^*		↗↘	↑≒, ≮	∨, ↓≮
Fa M^{**}		↘↗; ↗↘	↓△, ∨, ↑≒	↑△, ↓≮

Special Grouping of Nuclei in Re M

Second Bar of Re M Prelude (no. 5)

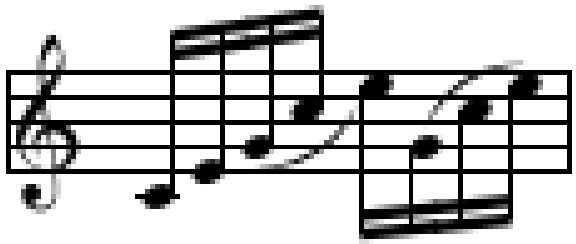




- bar 2 $\rightarrow$ I; bar 5 $\rightarrow$ V
- bar 10 = $\mathrm{III}\rightarrow\mathrm{II}$; bar 12)=$\mathrm{II}\rightarrow\mathrm{I}$
- bar 18 = VI; bar 19 $\rightarrow$ V:IV
- bar 21 $\rightarrow$$\mathrm{IV}$; bar 24 $\rightarrow$ I

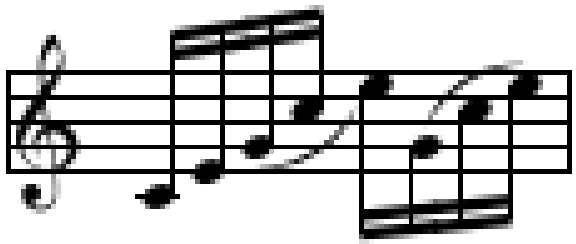
Second step

1. Expressing curves of pitch by numbers, always related to the first pattern - the reference pattern.
   [0, 4, 7, 12, 16], is the first nucleus of Do M.



Second step

1. Expressing curves of pitch by numbers, always related to the first pattern - the reference pattern.
   [0, 4, 7, 12, 16], is the first nucleus of Do M.



2. Analyzing them by using **Musical and Mathematical** tools

Mathematical Tools

1. **Peak notes and low notes** (of the upper voice)

Mathematical Tools

1. **Peak notes and low notes** (of the upper voice)
2. **Median** - 'center of gravity' or an 'inner organ point'

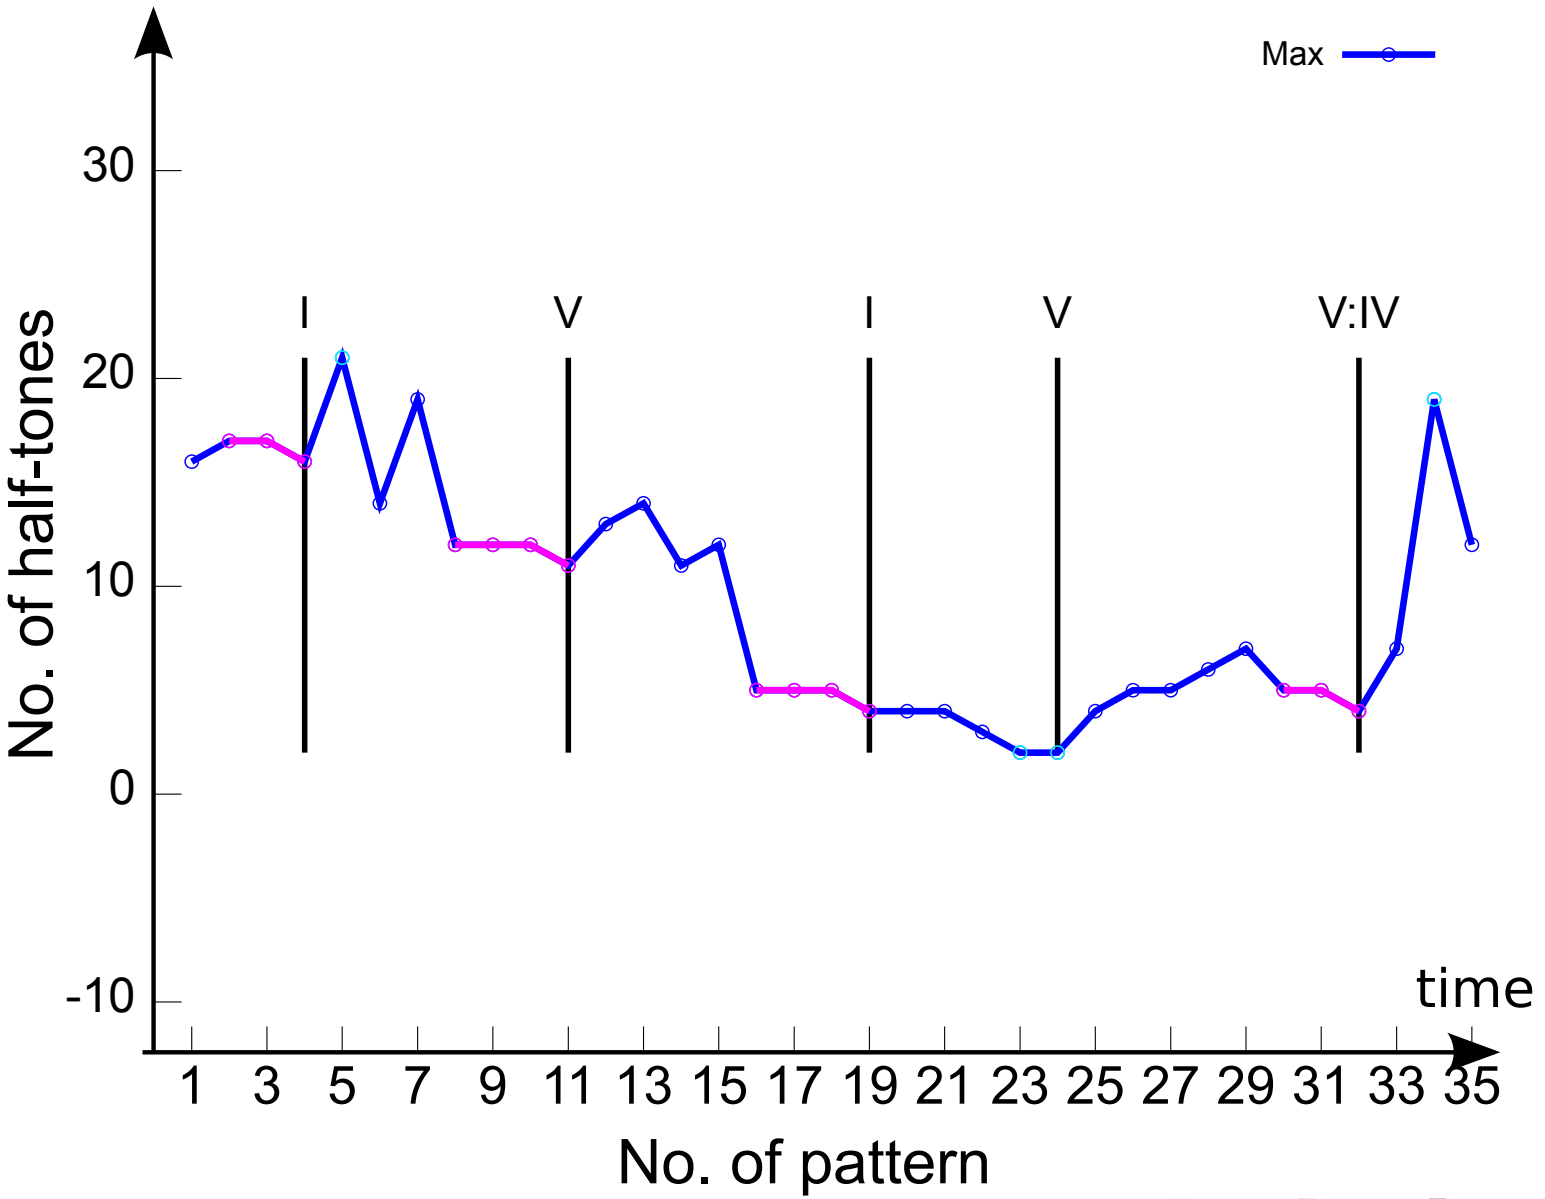
Mathematical Tools

1. **Peak notes and low notes** (of the upper voice)
2. **Median** - 'center of gravity' or an 'inner organ point'
3. **Linear Regression**

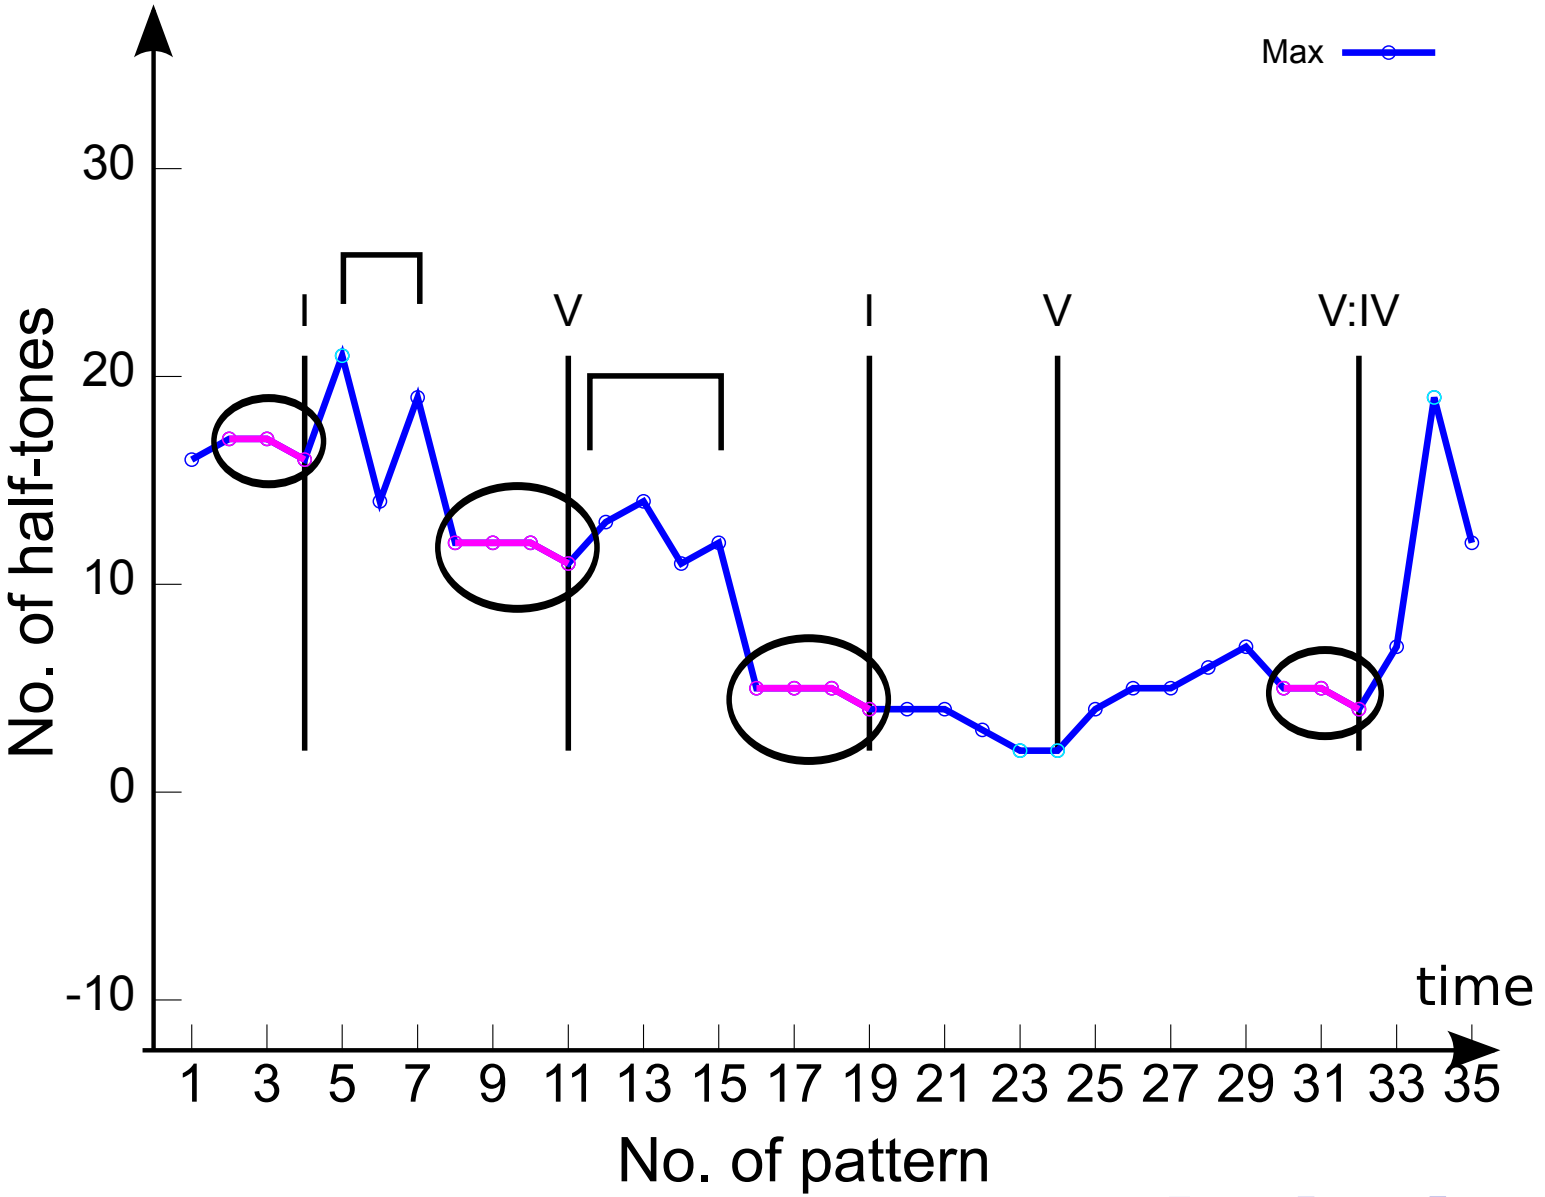
Mathematical Tools

1. **Peak notes and low notes** (of the upper voice)
2. **Median** - 'center of gravity' or an 'inner organ point'
3. **Linear Regression**
4. **Parabolic Regression**

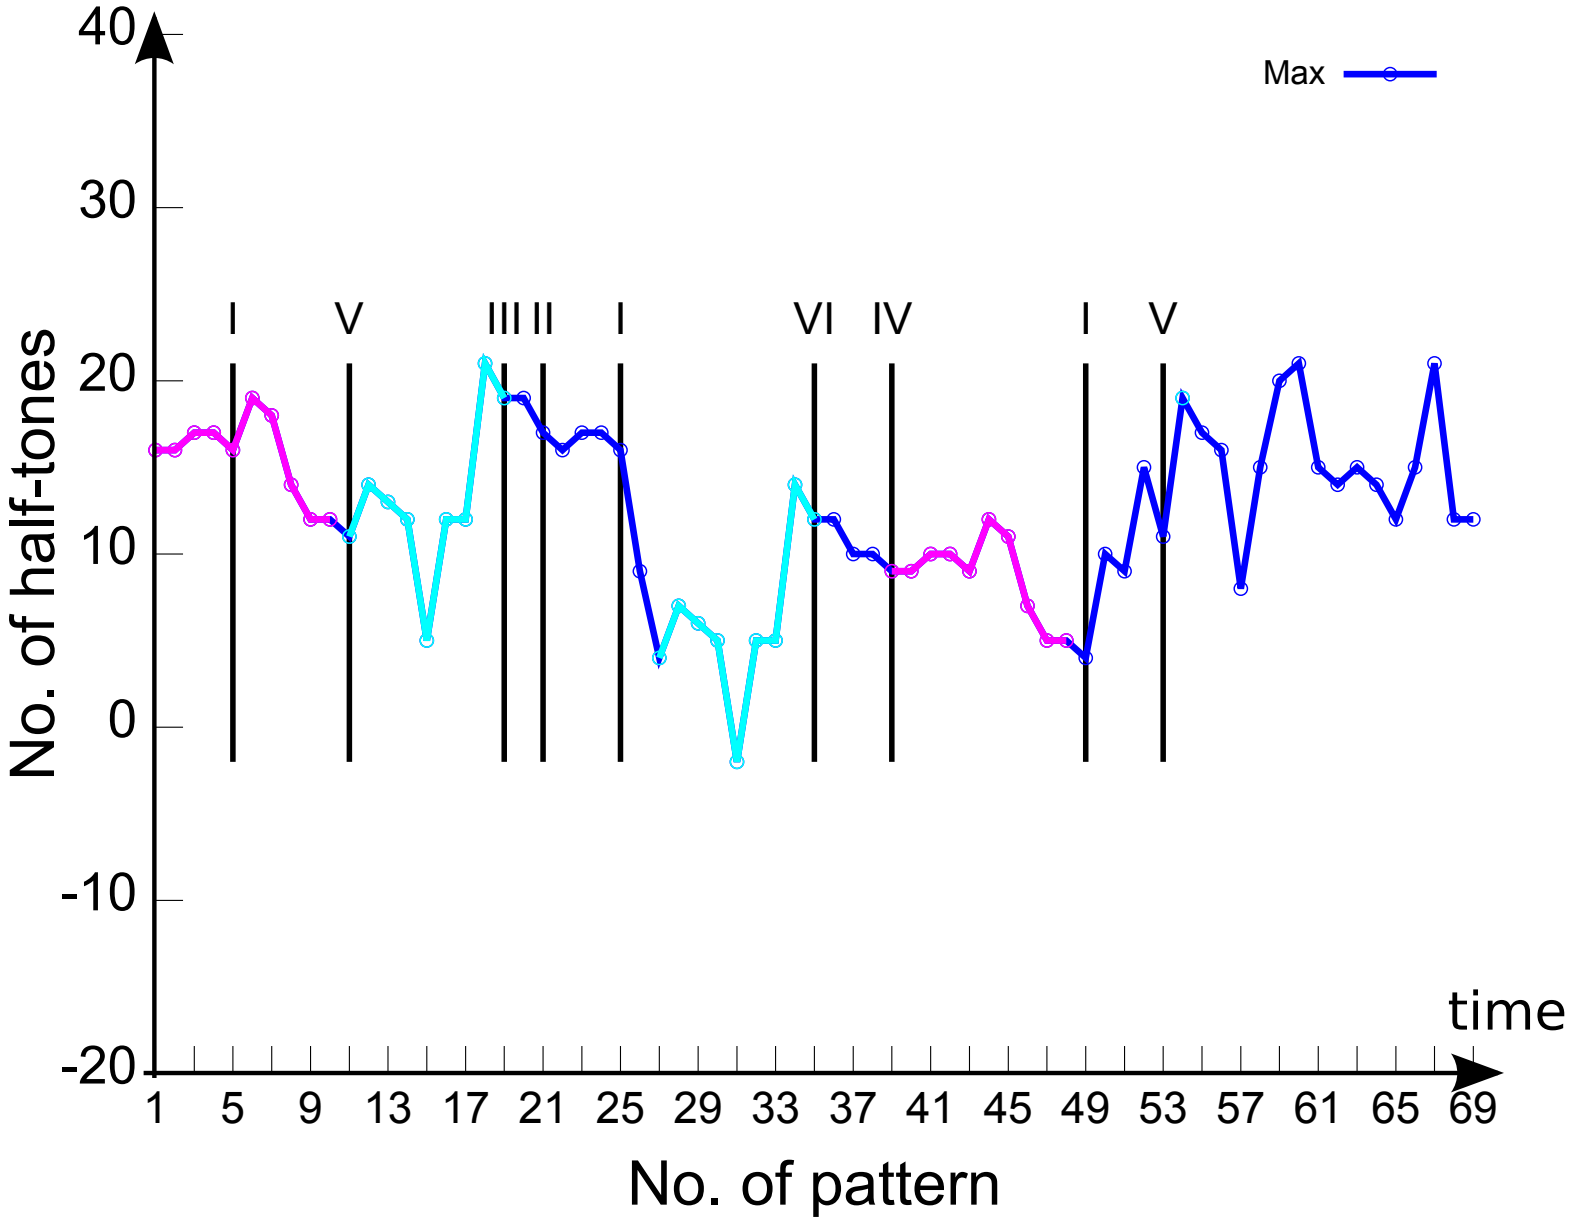
Curve of all Peak-notes of Do M



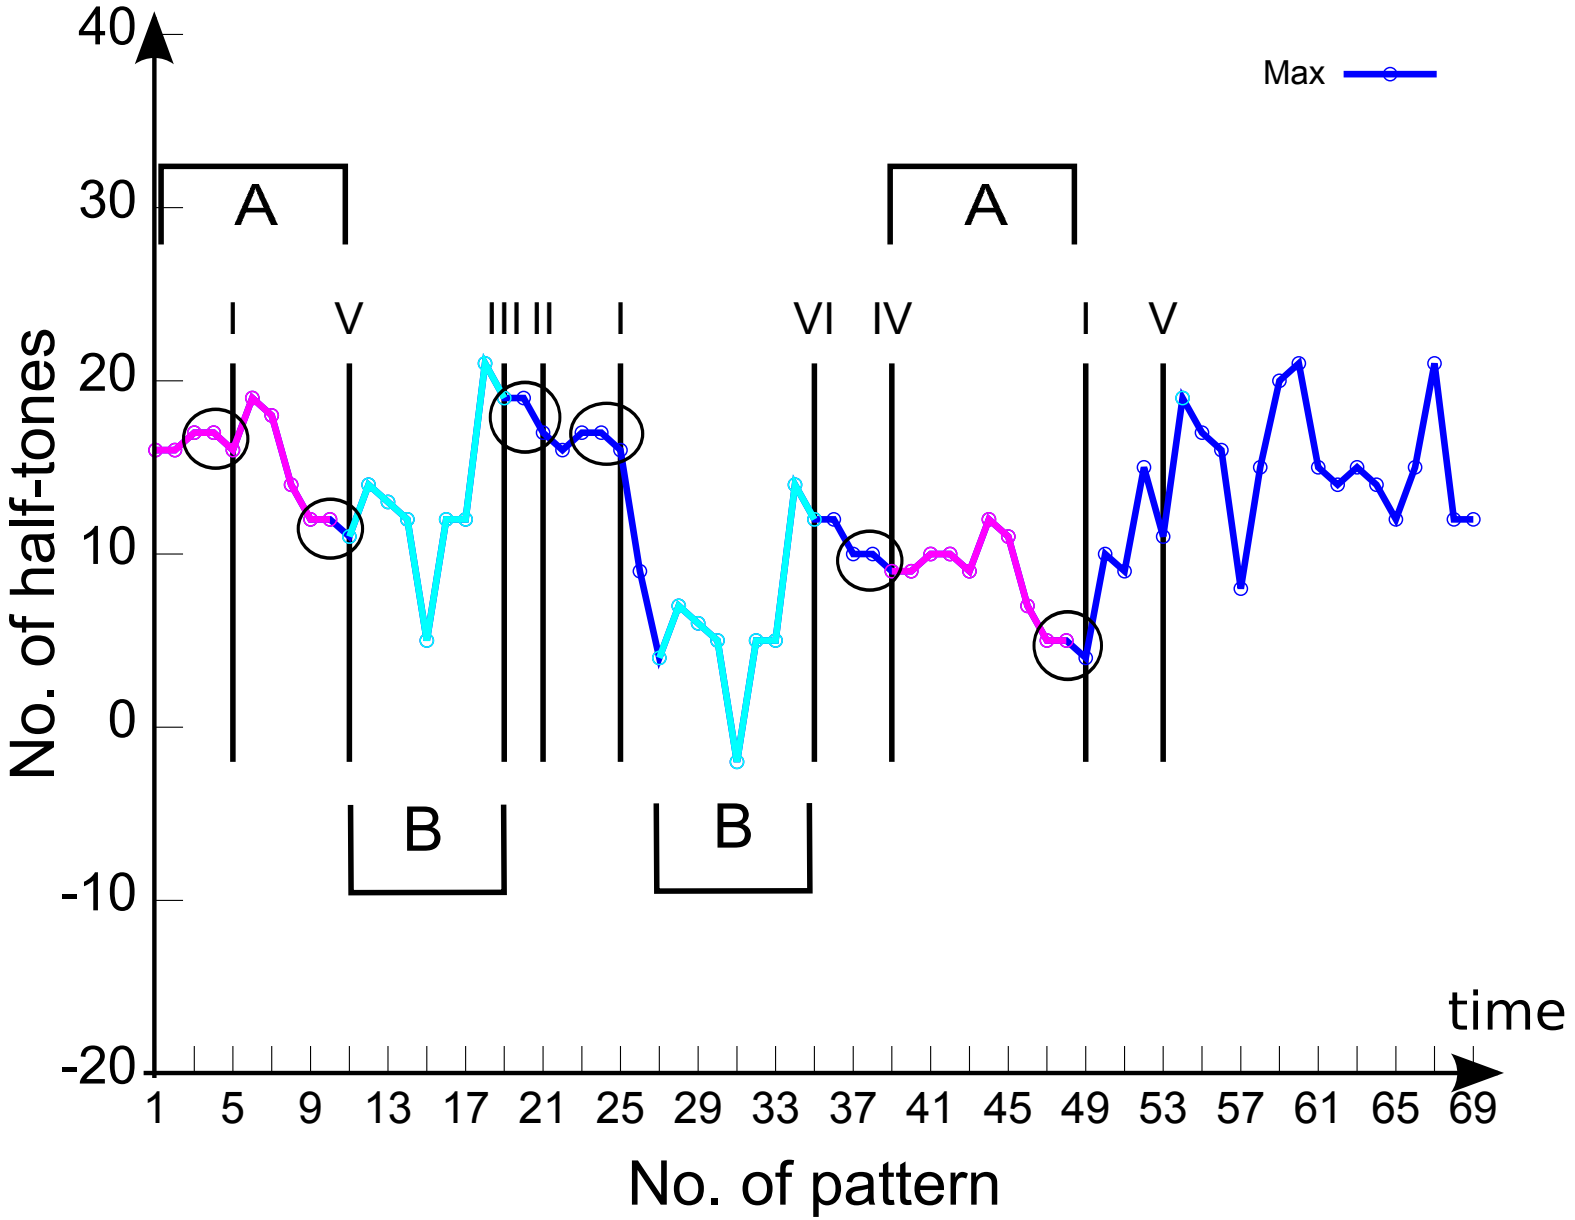
Curve of all Peak-notes of Do M



Curve of all Peak-notes of Re M



Curve of all Peak-notes of Re M



Mathematical Tools - cont.

Statistical Averages

Median - 'center of gravity' or an 'inner organ point'

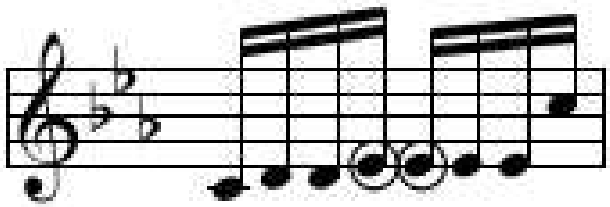
Median - a sort of mean of one pattern

First pattern of Do minor prelude (no. 2)

Median - a sort of mean of one pattern

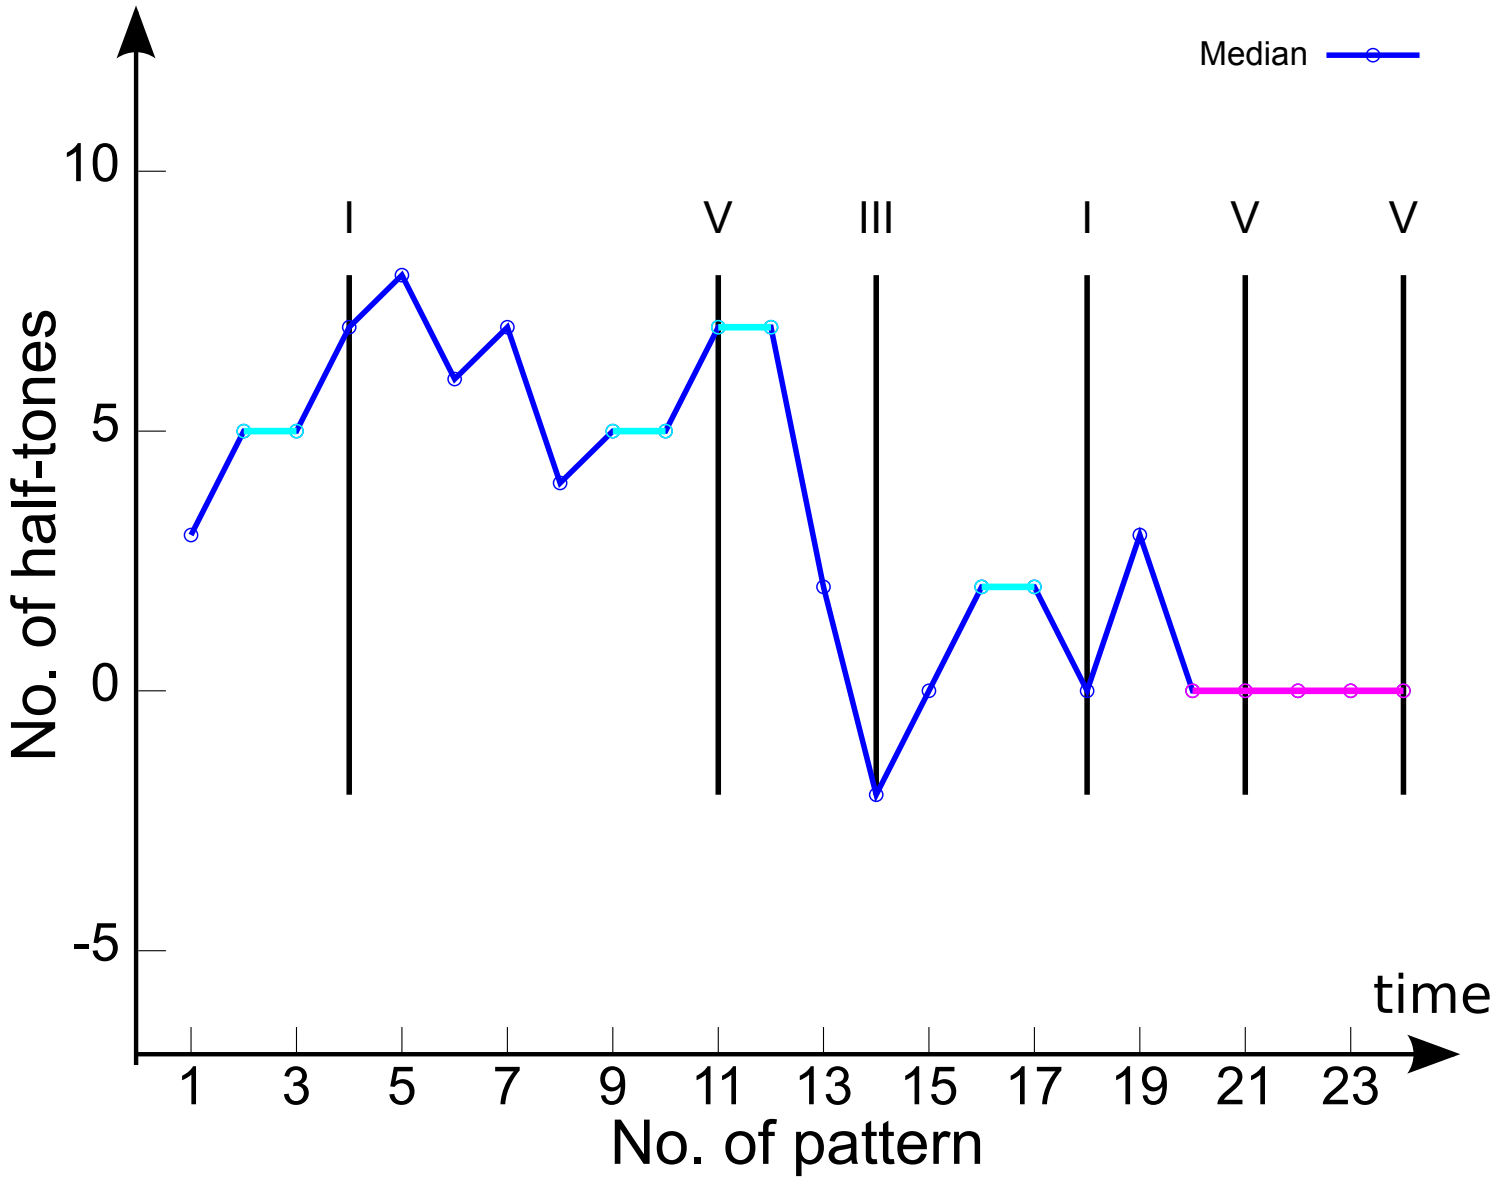
First pattern of Do minor prelude (no. 2)

In order to obtain the **Median**, we arrange all pitches according to increasing pitch.

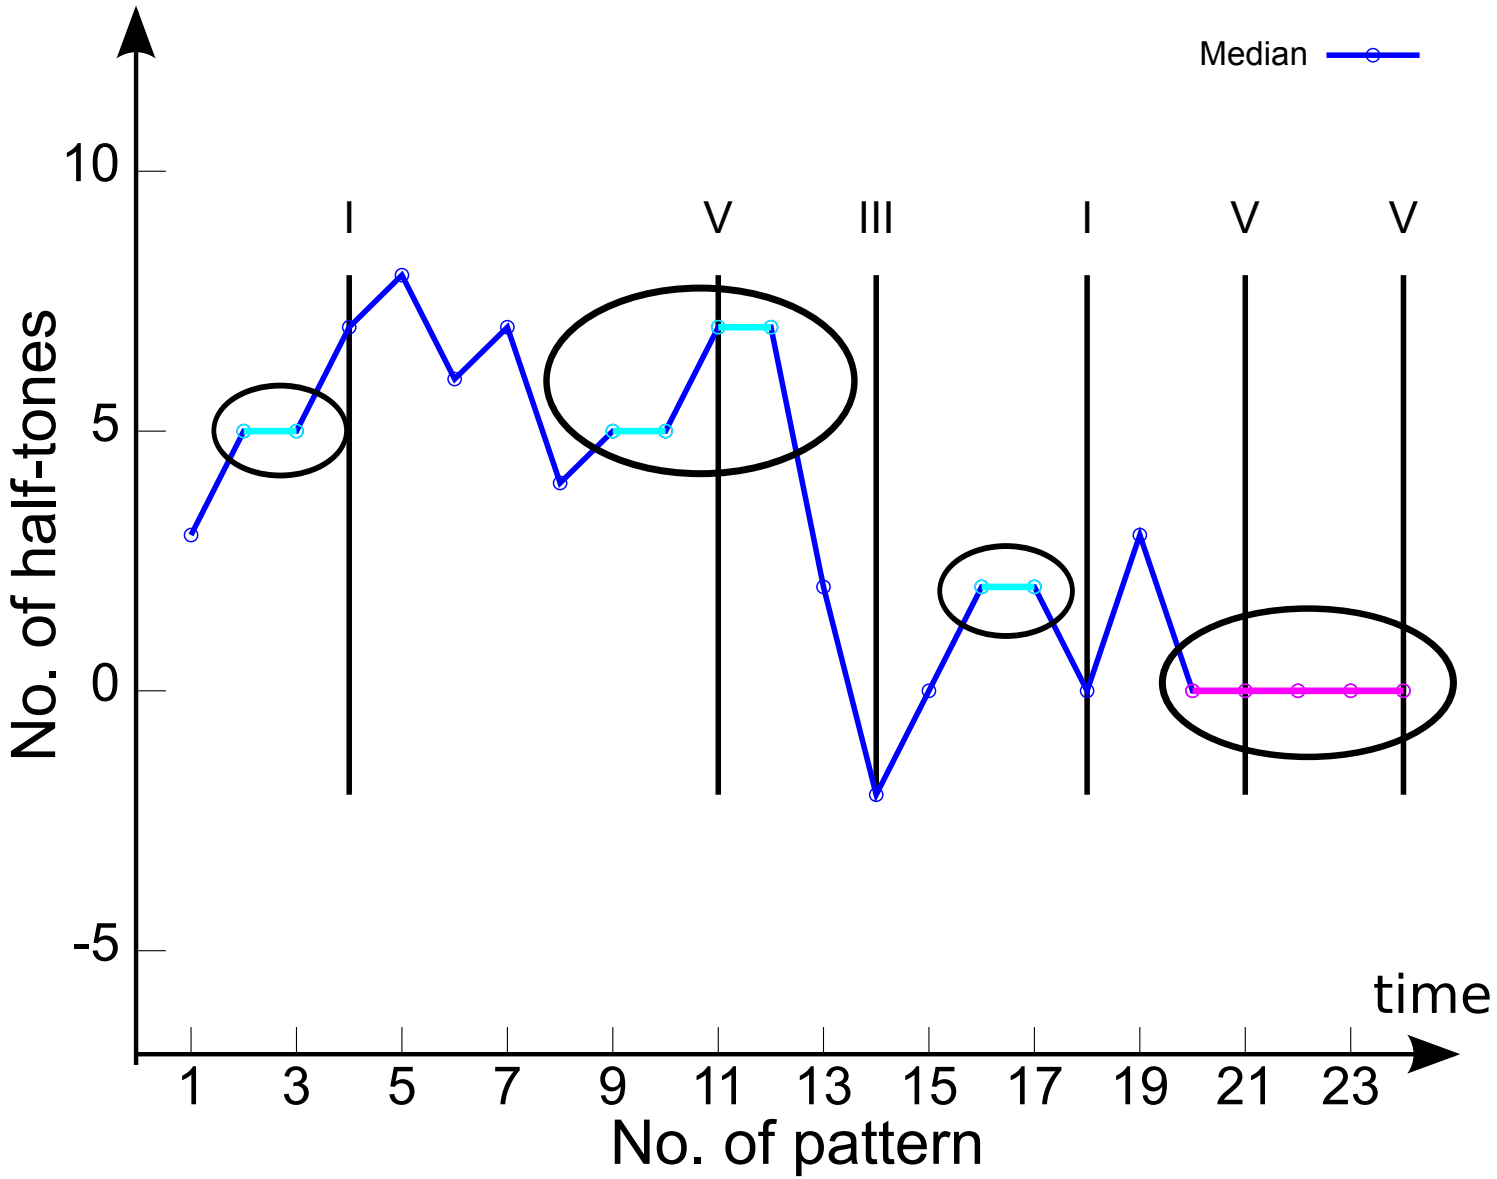


The pitch that is located in the middle of the row, is the median - **Mi** ♭.

Curve of all Medians of Do minor



Curve of all Medians of Do minor



Mathematical Tools - cont.

Geometric Statistics

- **Linear Regression**
- **Parabolic Regression**

Regression line - a comparison between two patterns

$$y = a \cdot x + b$$

$$\text{Find} \quad \min_{a,\, b} S(a, b), \quad \text{where :}$$

$$S(a, b) = \sum_{i=1}^{n} \left(y_i - (a \cdot i + b)\right)^2$$

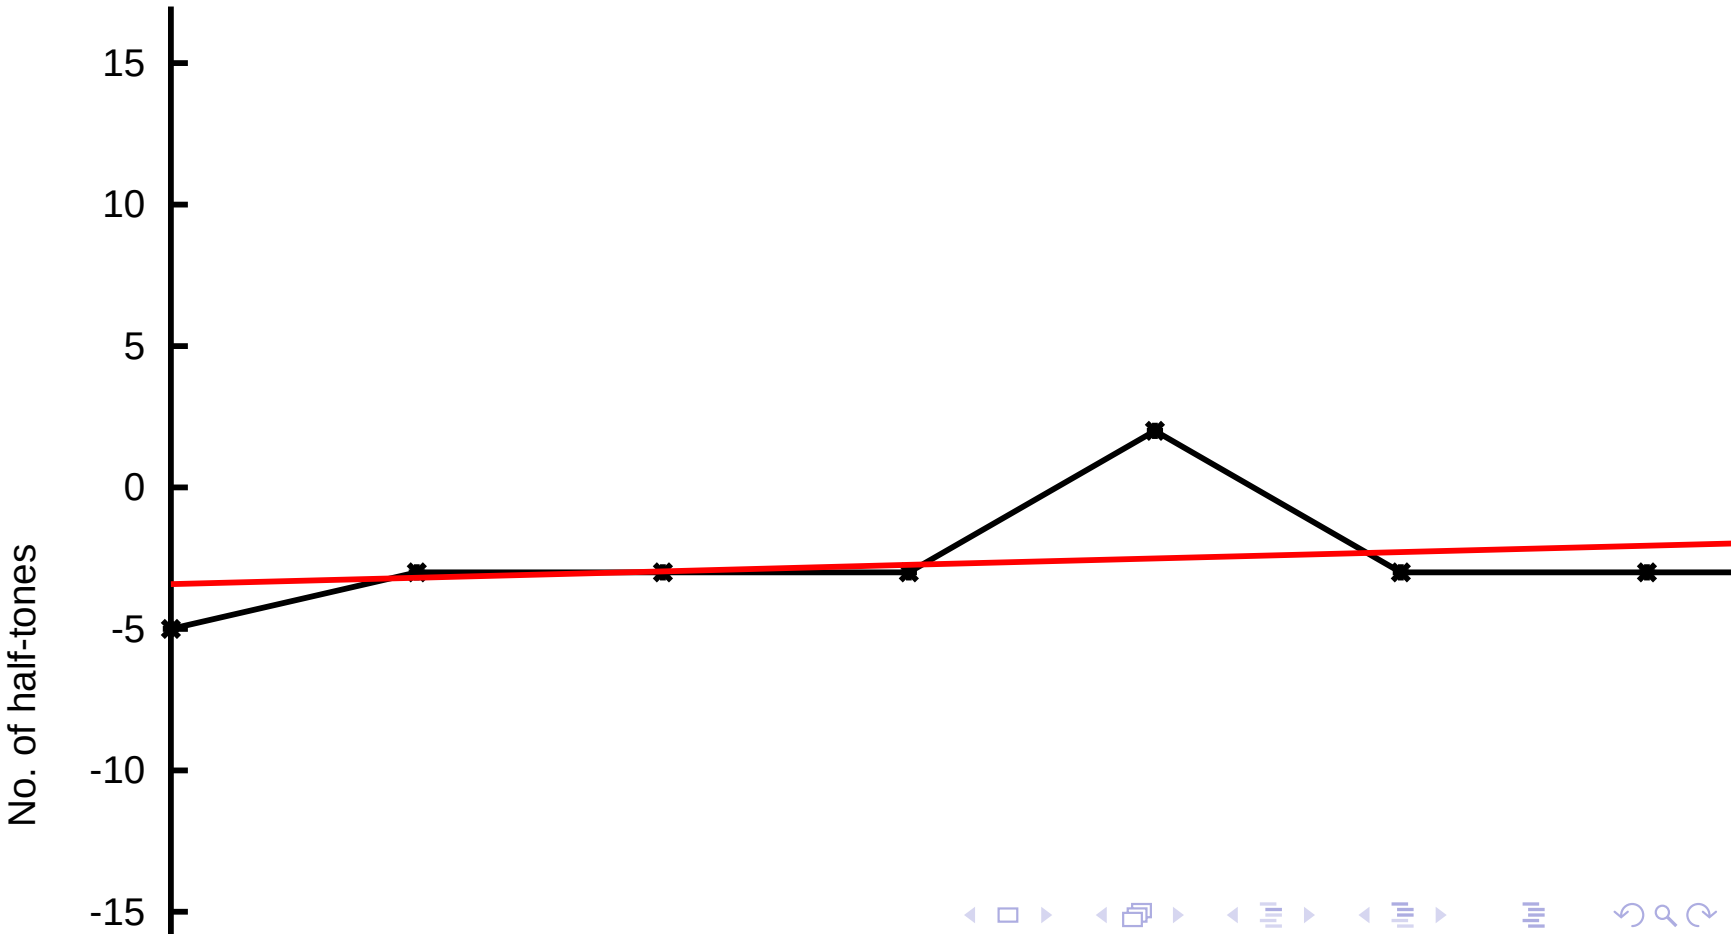
$$\frac{\partial S}{\partial a} = 0$$

$$\frac{\partial S}{\partial b} = 0$$

$$\Rightarrow a, b = \ldots$$

Creating a Regression Line

Patterns $1, 23$**, in Do** m.



Parabolic Regression - a comparison between two patterns

$$y = a \cdot x^2 + bx + c$$

$$\text{Find} \quad \min_{a,\, b,\, c} S(a, b, c), \quad \text{where :}$$

$$S(a, b, c) = \sum_{i=1}^{n} \left(y_i - (a \cdot i^2 + b \cdot i + c)\right)^2$$

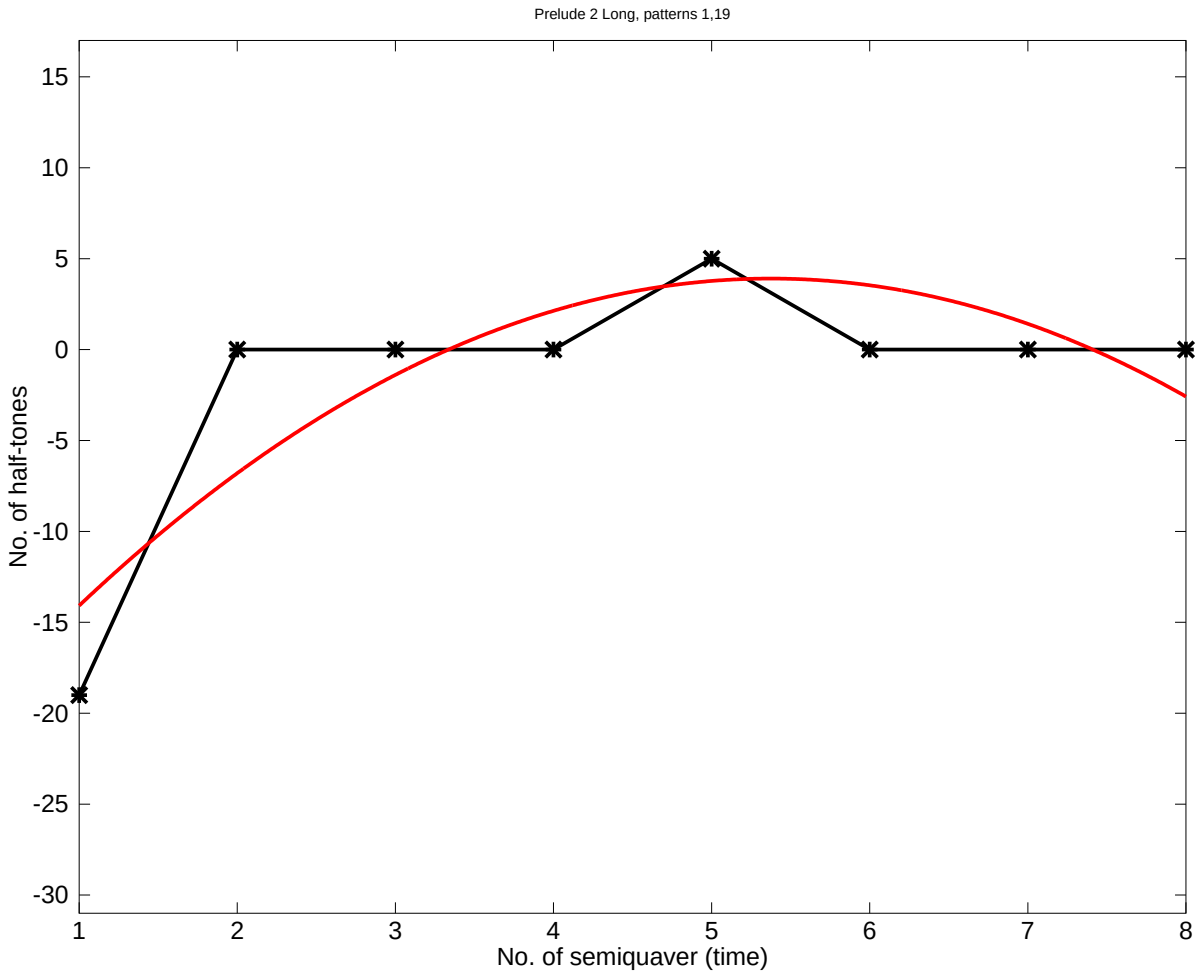
$$\frac{\partial S}{\partial a} = 0$$

$$\frac{\partial S}{\partial b} = 0$$

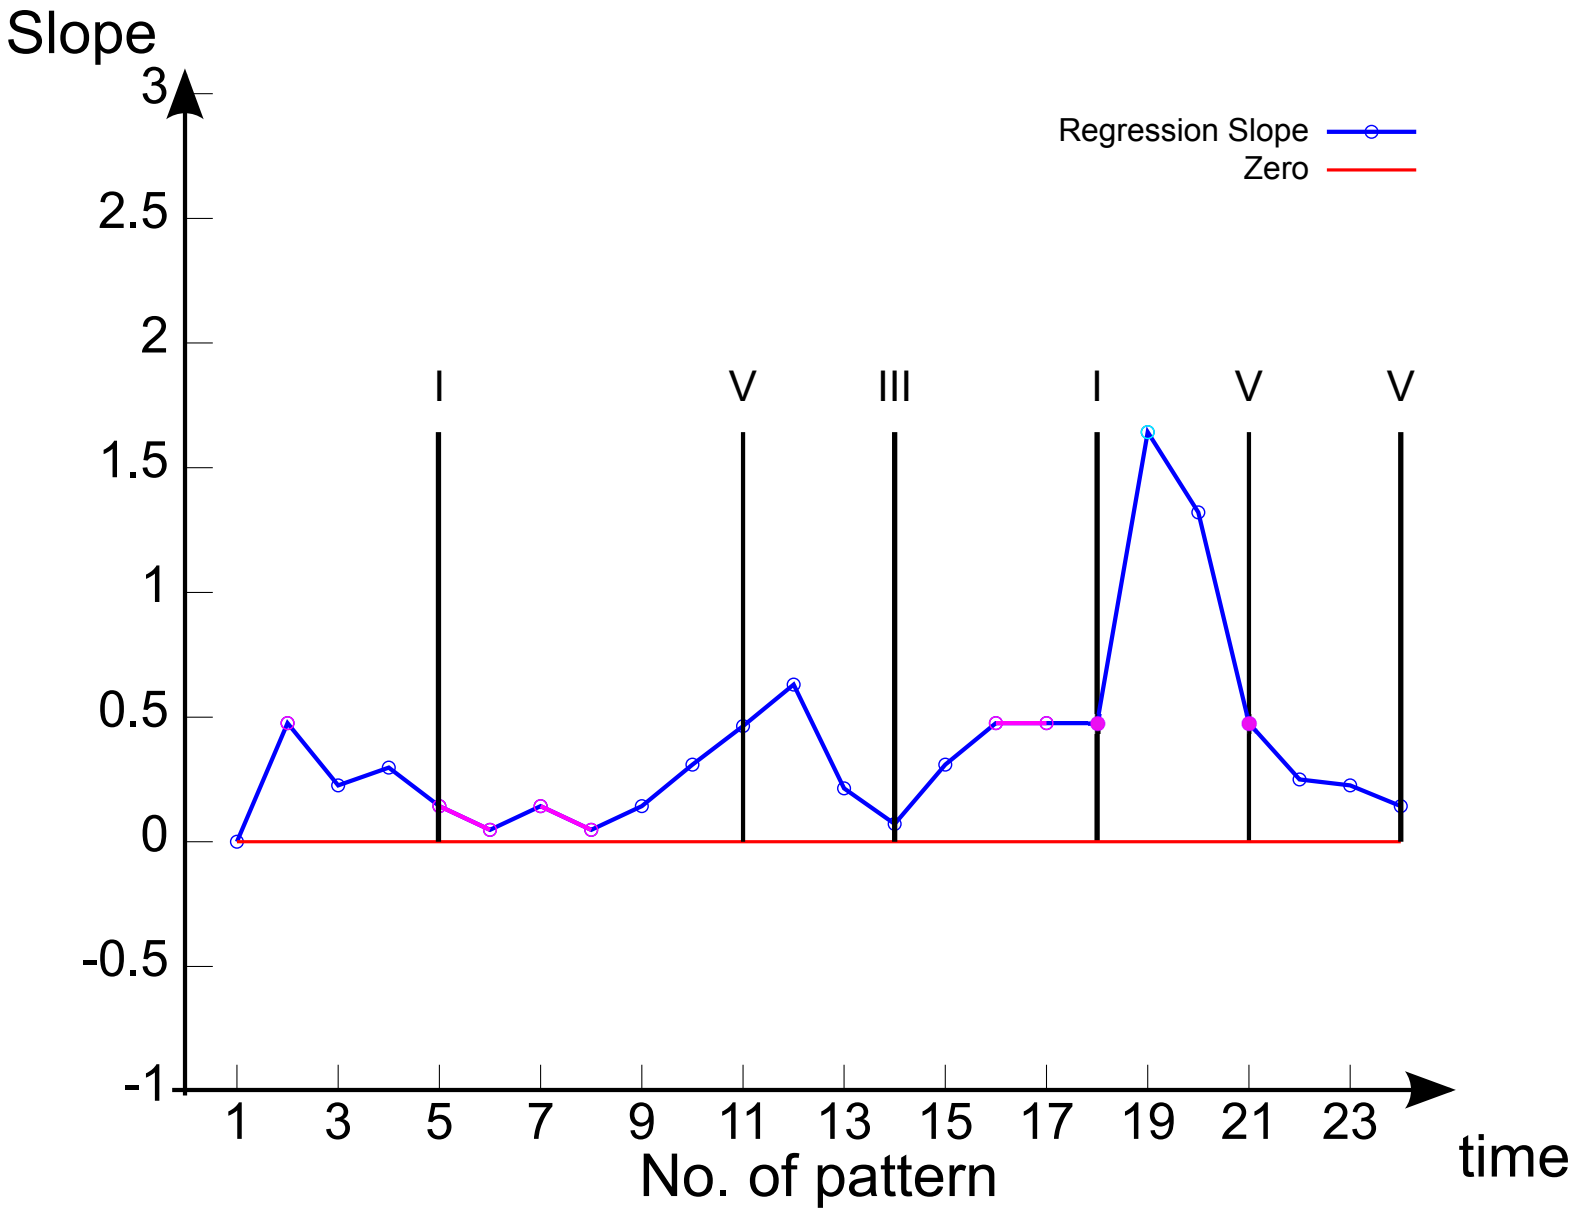
$$\frac{\partial S}{\partial c} = 0$$

$$\Rightarrow a, b, c = \ldots$$

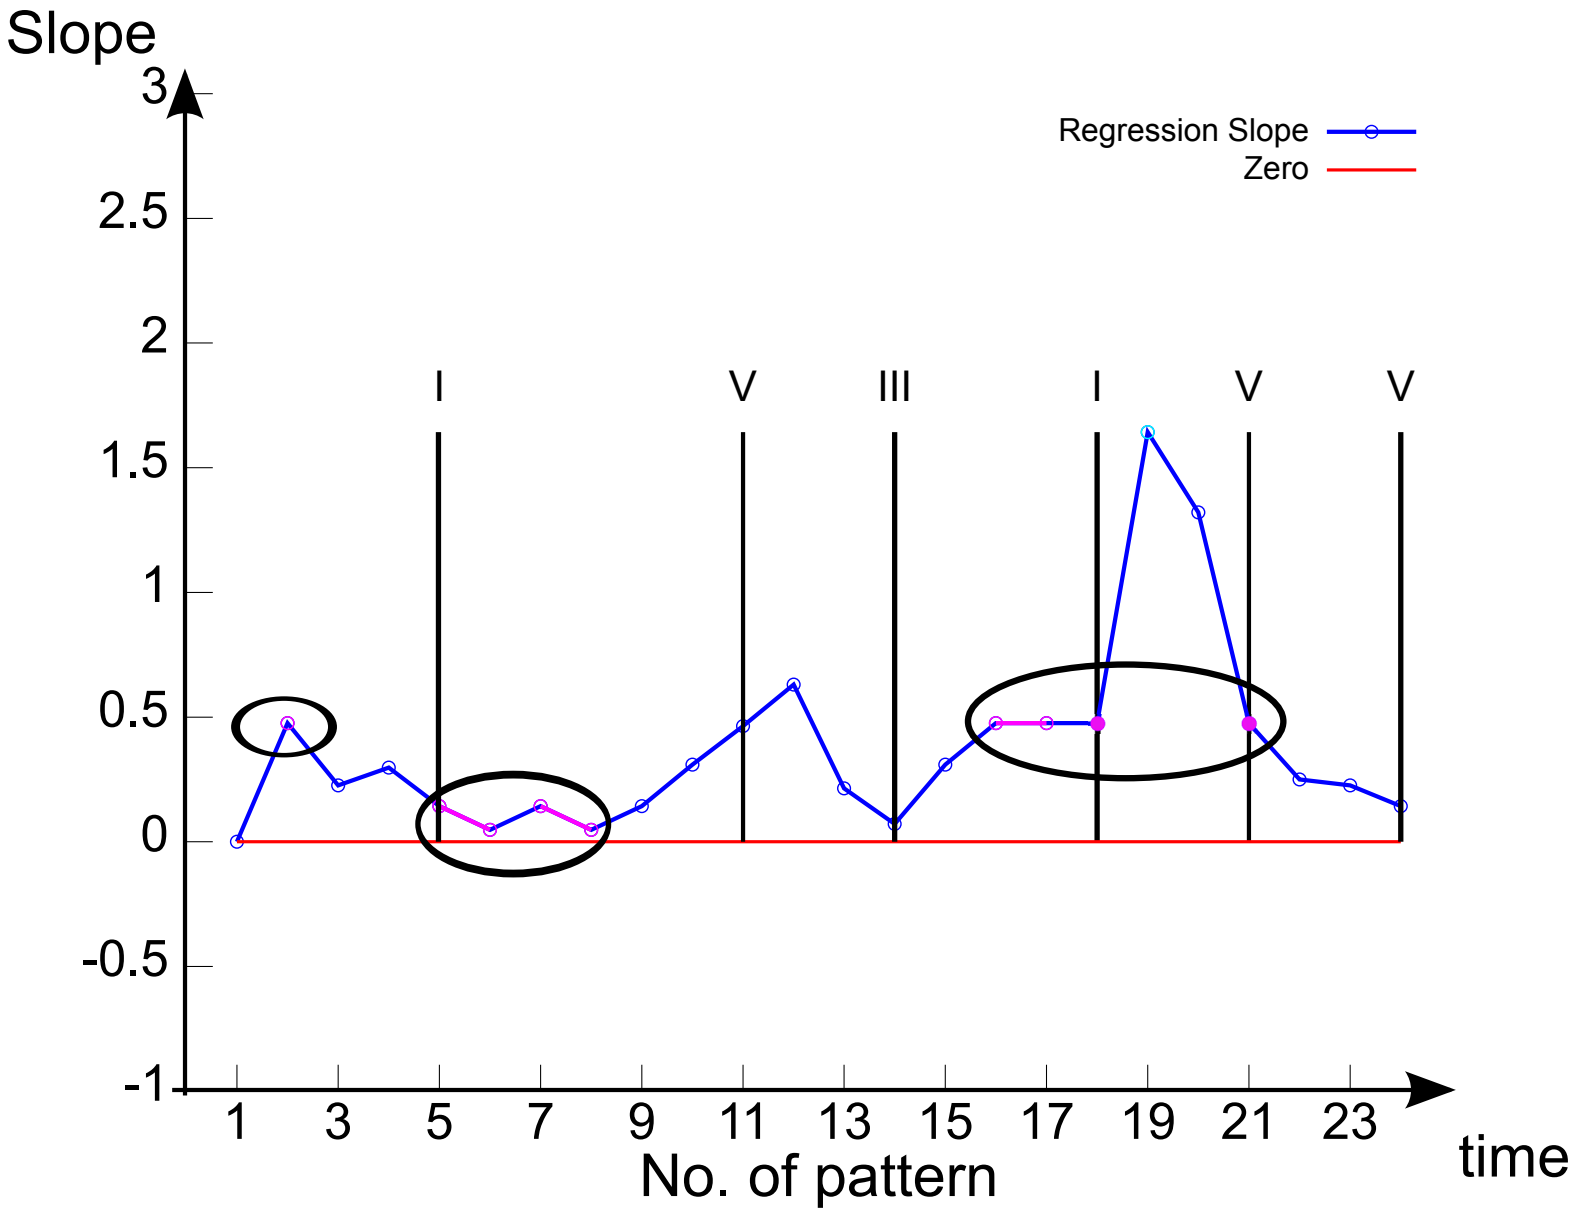
Creating a Parabolic Regression Curve - Do minor



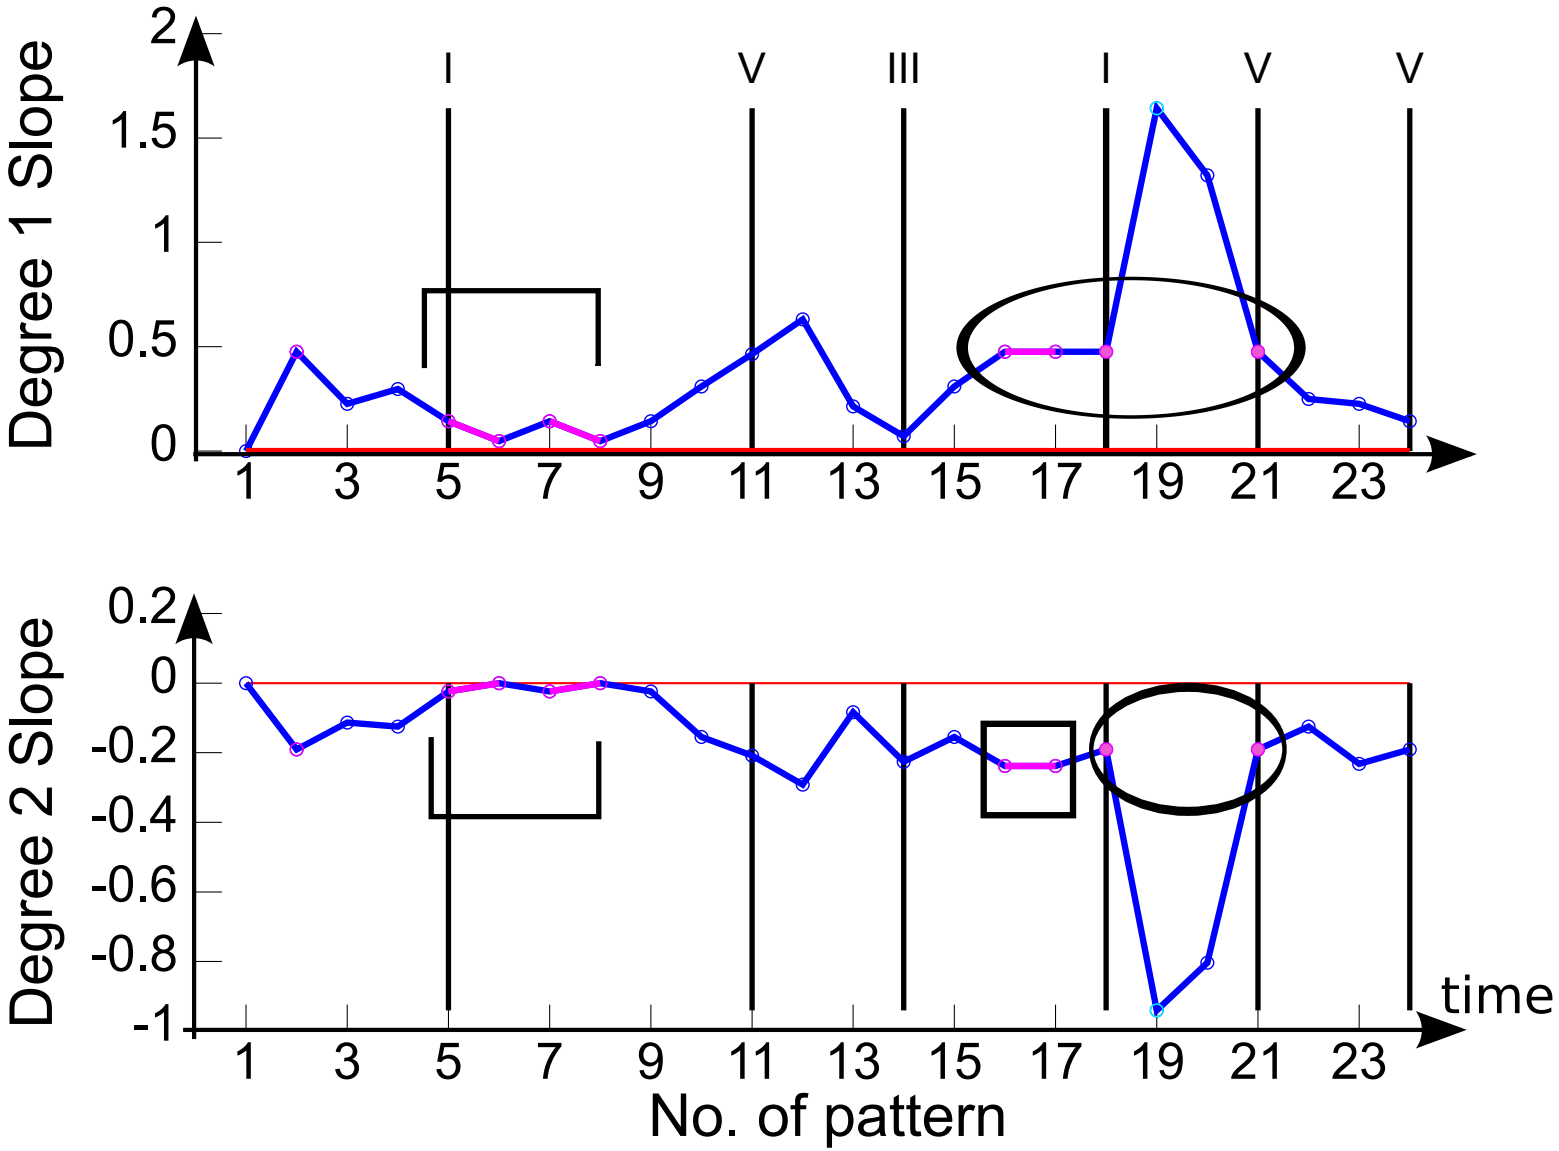
Linear Reg. of Do minor



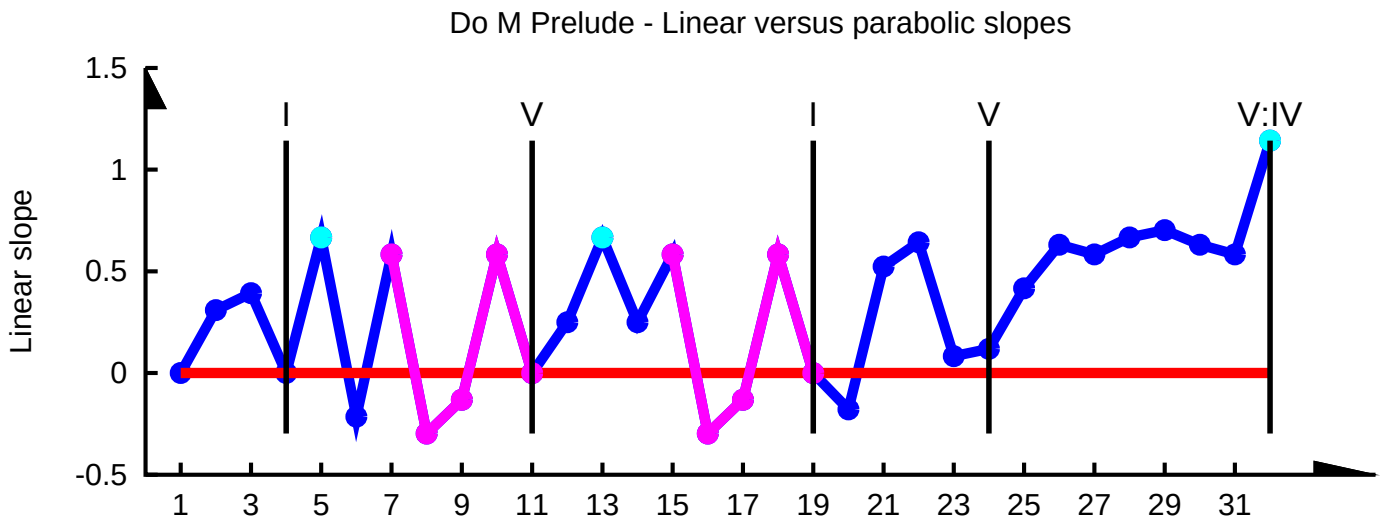
Linear Reg. of Do minor



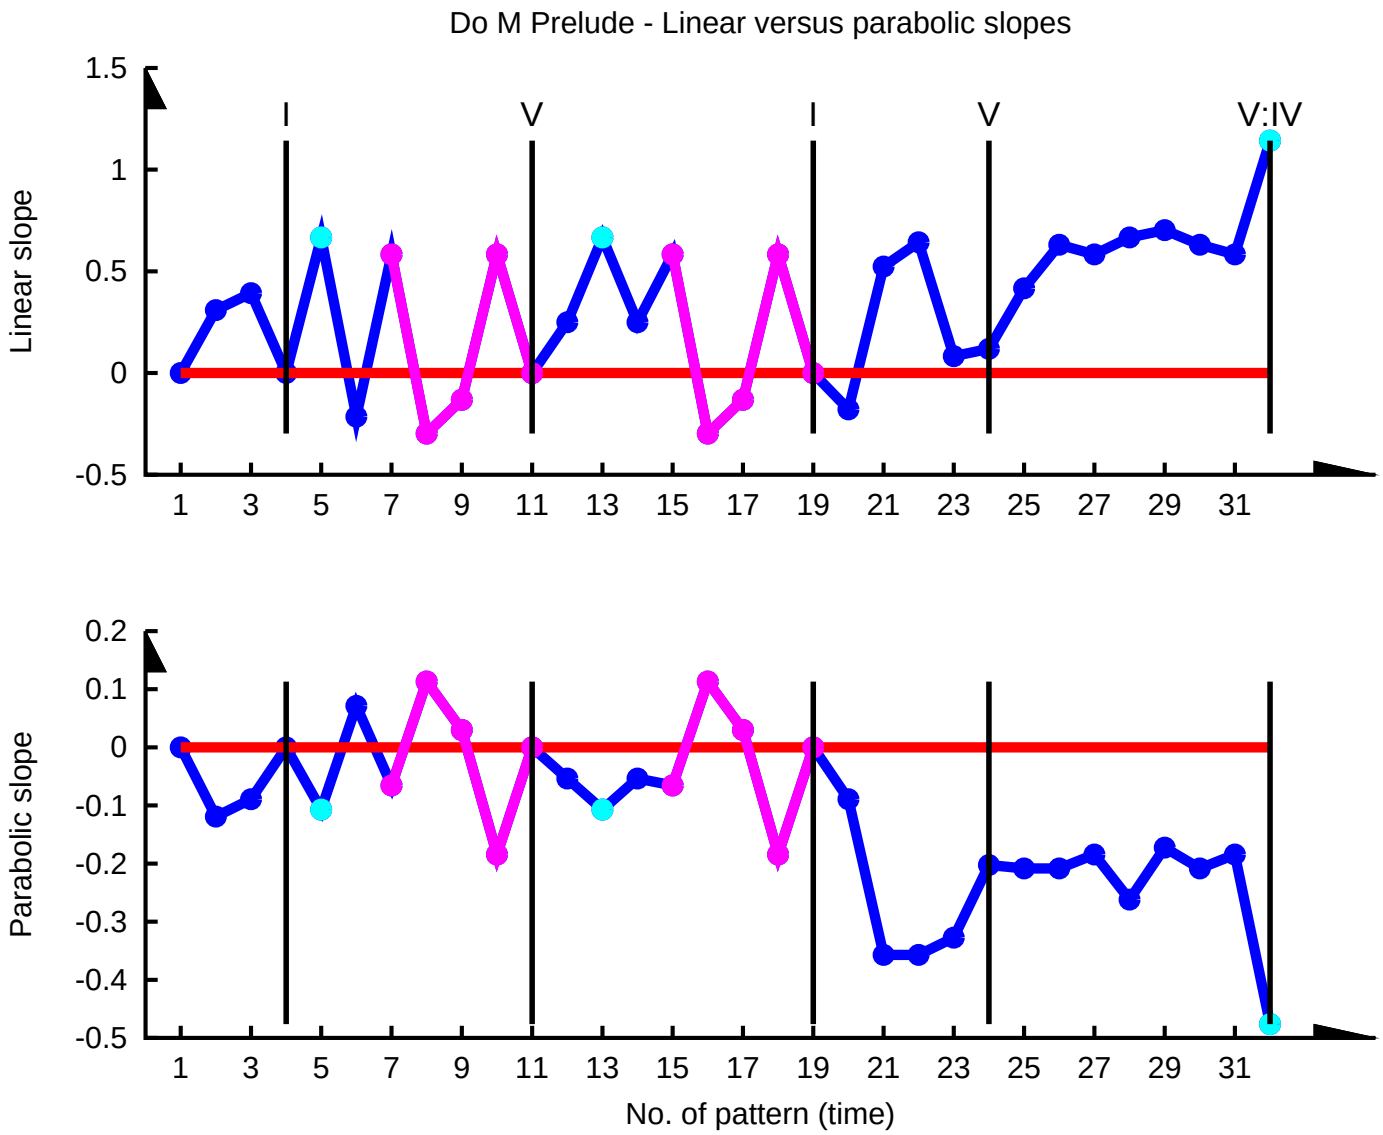
Intersecting Linear and Parabolic Reg. of Do minor



Linear Reg. of Do M



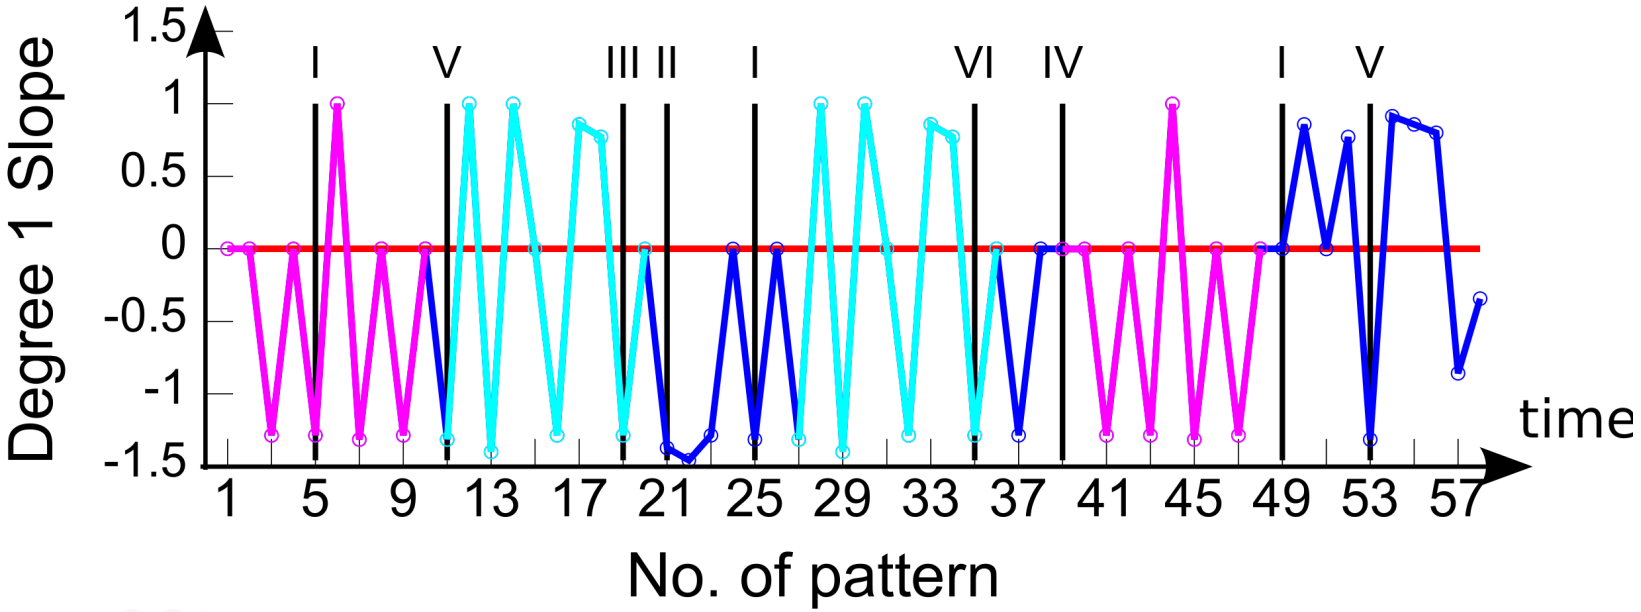
Intersecting Linear and Parabolic Reg. of Do M



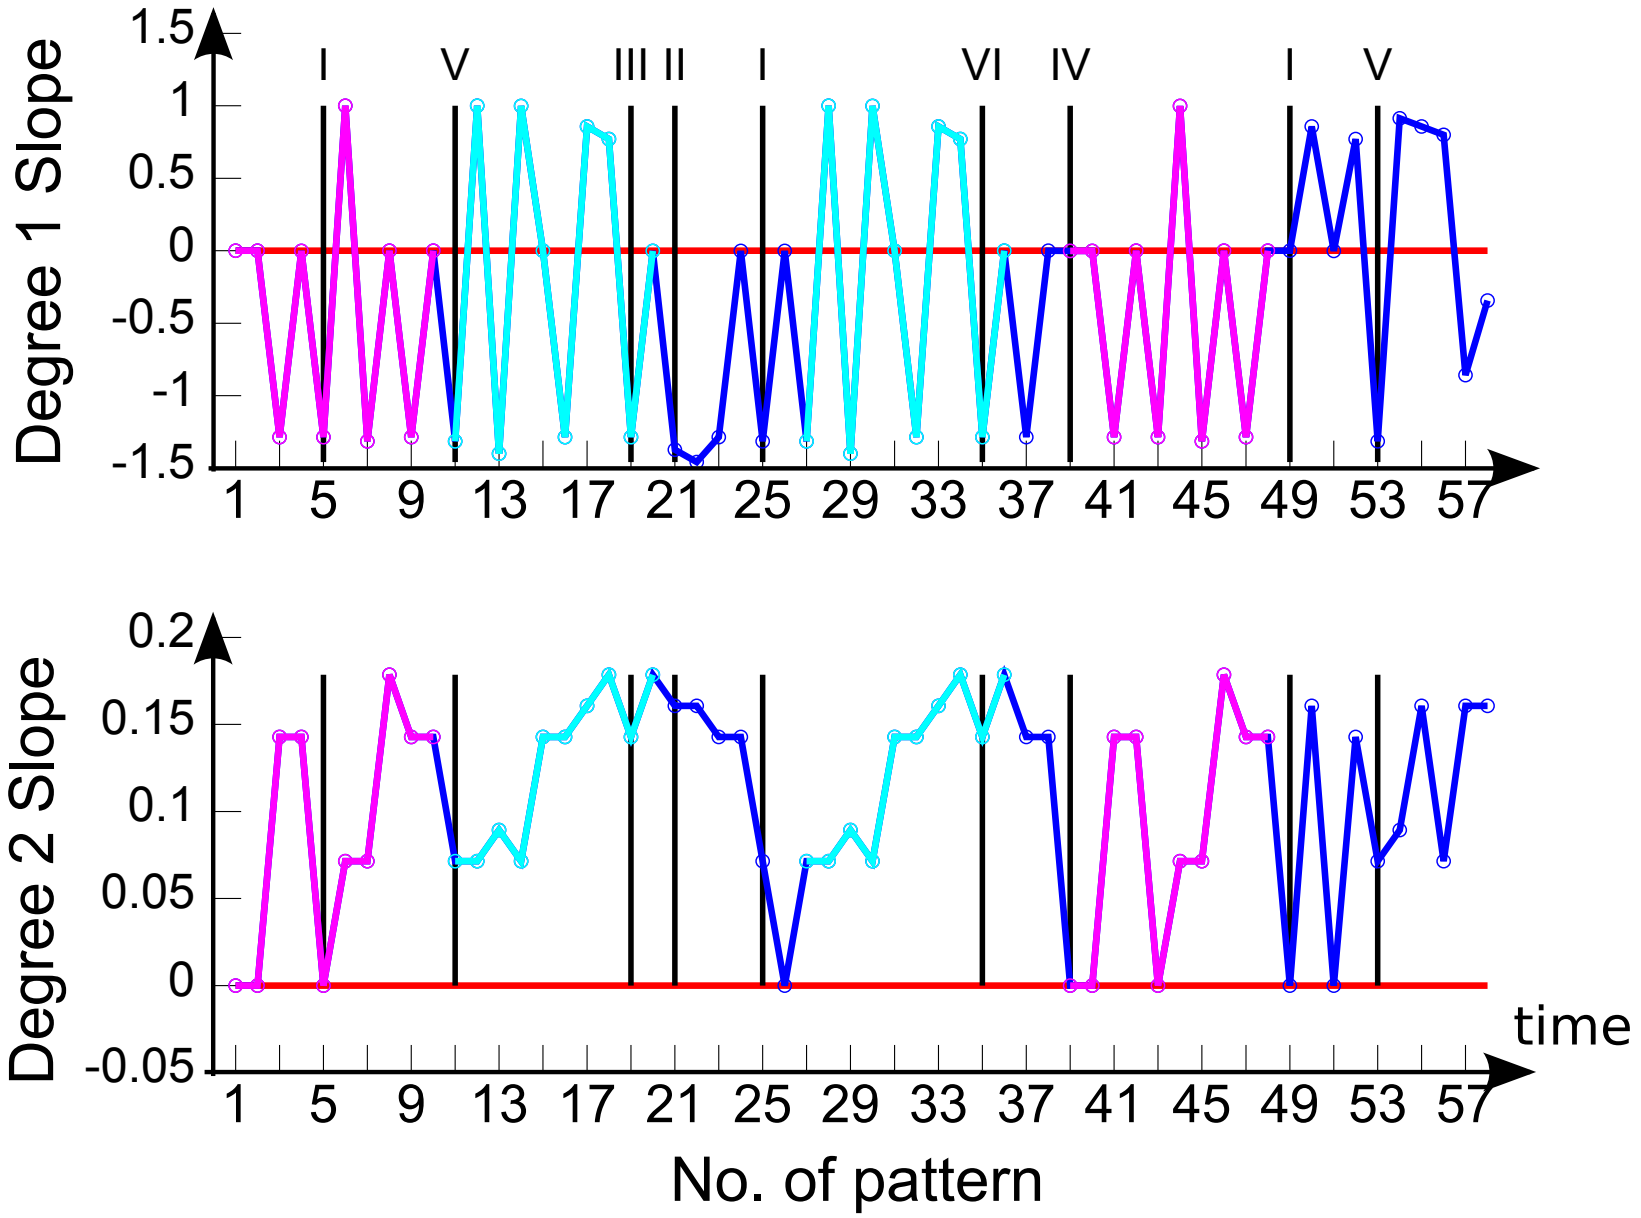
Slopes of Re M

pattern	pat.versus pat.	Line. Slope	value	Parab. Slope	value
3 			−1.29		0.14
28 			1.00		0.07

Linear Reg. of Re M



Intersecting Linear and Parabolic Reg. of Re M



Summary

1. Revealing rules of organization in **Bach's 'even' preludes** using musical and mathematical tools

Summary

1. Revealing rules of organization in **Bach's 'even' preludes** using musical and mathematical tools
2. Studying the '**New Variable**': small, hidden, meaningful **deviations** of **Natural Schemata** that shed new light on the **mutual relations** between Natural and Learned Schemata and on **Bach**'s style.

Summary

1. Revealing rules of organization in **Bach's 'even' preludes** using musical and mathematical tools
2. Studying the '**New Variable**': small, hidden, meaningful **deviations** of **Natural Schemata** that shed new light on the **mutual relations** between Natural and Learned Schemata and on **Bach**'s style.
3. Defining the **natural characteristics** that support the tonal centers: 1. (4,4,4,3) pattern. 2. breaking a sequence. 3. inverting a pitch curve. 4. inner organ points.

Summary

1. Revealing rules of organization in **Bach's 'even' preludes** using musical and mathematical tools
2. Studying the '**New Variable**': small, hidden, meaningful **deviations** of **Natural Schemata** that shed new light on the **mutual relations** between Natural and Learned Schemata and on **Bach**'s style.
3. Defining the **natural characteristics** that support the tonal centers: 1. (4,4,4,3) pattern. 2. breaking a sequence. 3. inverting a pitch curve. 4. inner organ points.
4. Constructing a generic model of an **'even'**prelude by Bach.
